

## Subject card

Subject name and code	, PG_00058867						
Field of study	Nanotechnology						
Date of commencement of studies	October 2023		Academic year of realisation of subject		2023/2024		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		8.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Differential Equations and Mathematical Applications -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Anna Niewulis				
	Teachers		dr Leszek Ziemczonek dr Anna Niewulis				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	45.0	0.0	0.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	75		15.0		110.0	200
Subject objectives	Students obtain competence in the range of using methods of mathematical analysis and knowledge how to solve simple problems that can be found in the field of engineering.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_U01		Student recognizes the importance of self-expanding knowledge and take the challenge of working with a group to solve a problem.		[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information		
	K6_W02		Student mentions basic properties of elementary functions. Student solves equations and inequalities with elementary functions. Student calculates limits of the sequences and functions Student determines intervals of monotonicity of a given functions and its extrema. Student calculates antiderivatives using the substitution method of integration and integration by parts. Student applies definite integrals to solving geometrical problems.		[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation		

Subject contents	Functions of one variable and their properties: The absolute value function definition, solving equations and inequalities with absolute value, graphs of functions with absolute value. Power functions solving power and polynomial equations and inequalities. Rational functions solving rational equations and inequalities. Exponential function properties and graphs, solving exponential equations and inequalities. Logarithmic functions properties and graphs, solving logarithmic equations and inequalities. Trigonometric and cyclometric functions properties and graphs, solving trigonometric equations and inequalities. Limits and continuity: Infinite sequences. Fundamental definitions of a limit of a sequence, convergence and divergence, limit theorems. Applications to solving equation. Differential calculus of one variable functions and its applications: Definition of a first derivative and differential. Rolls and Lagranges theorems. Higher derivatives and differentials. Monotonicity and local extrema. Convexity, concavity and inflexion points of a function. De IHospitals Thorem. Asymptotes. Applying differential calculus to studying the properties of one variable functions. Integral calculus of one variable functions antiderivatives: The process of finding antiderivatives and integration formulas the substitution method of integration and integration by parts. Definite integrals in Riemanns sense: Newton-Leibniz Thorem. Integration formulas, the substitution method of integration and integration by parts for definite integrals.											
Prerequisites and co-requisites												
Assessment methods and criteria	<table><tr><th>Subject passing criteria</th><th>Passing threshold</th><th>Percentage of the final grade</th></tr><tr><td>Exam</td><td>50.0%</td><td>50.0%</td></tr><tr><td>Colloquium</td><td>50.0%</td><td>50.0%</td></tr></table>	Subject passing criteria	Passing threshold	Percentage of the final grade	Exam	50.0%	50.0%	Colloquium	50.0%	50.0%		
Subject passing criteria	Passing threshold	Percentage of the final grade										
Exam	50.0%	50.0%										
Colloquium	50.0%	50.0%

Basic literature	<b>Basic literature</b>  K. Kuratowski, Introduction to calculus, Pergamon press, 1961											
Supplementary literature	<b>Supplementary literature</b>											
eResources addresses	Adresy na platformie eNauczanie: WFTiMS - NT - Analiza Matematyczna 2023/2024 (A.Niewulis) - Moodle ID: 32499 <a href="https://enauczenie.pg.edu.pl/moodle/course/view.php?id=32499">https://enauczenie.pg.edu.pl/moodle/course/view.php?id=32499</a>											
Example issues/ example questions/ tasks being completed	<p>Find the domain and the set of values of the function <math>f(x)=\dots</math> . Determine the inverse function of <math>f</math>.</p> <p>Evaluate the limit of the function <math>f(x)=</math></p> <p>Sketch the graph of the function <math>f(x)=</math> . Identify any local extrema and points of inflection.</p> <p>Find the area between the two curves <math>y=</math> and <math>y=</math> from <math>x=</math> to <math>x=</math> .</p> <p>Evaluate the indefinite integral of the function <math>f(x)=</math></p>											
Work placement	Not applicable
