

Subject card

Subject name and code	, PG_00058871						
Field of study	Nanotechnology						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			8.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Instytut Nanotechnologii i Inżynierii Materiałowej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Leszek Wicikowski					
	Teachers	dr inż. Leszek Wicikowski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	45.0	0.0	0.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	75	15.0		110.0		200
Subject objectives	The aim of this subject is to obtain the students competence in the range of using the basic methods of mathematical analysis and linear algebra. Furthermore, the student is able to use this knowledge to solve simple theoretical and practical problems that can be found in the field of engineering.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K6_W02	The student analyzes the properties of the two variables function based on the differential calculus of multiple variables. Student applies double and triple integrals in geometry problems. Student determines general and specific integrals of some types of first and second order differential equations. Student examines the convergence of numerical and power series.			[SW1] Assessment of factual knowledge		
	K6_U01	The student appreciates the importance of expanding knowledge independently.			[SU2] Assessment of ability to analyse information		
Subject contents	Functions of two variables: Limit and continuity of a function of several variables. Partial derivatives. Total differential. Taylors formula. Maxima and minima of a function of several variables. Double integrals over rectangles and normal domains. Two dimensional change of variables theorem. Applications of double integrals. Triple integrals over cuboids and normal domains. Three dimensional change of variables theorem. Applications of triple integrals. Number series : Number series. Convergent and divergent series. Convergence tests of the number series. Function series: Power and Fourier series Ordinary differential equations: First order differential equations. General and particular solution. The Cauchy initial value problem. Variables separable, linear, Bernoulli, exact differential equations. Second order linear differential equations with constant coefficients						
Prerequisites and co-requisites	An introductory course in mathematical analysis in the field of functions of one variable						
Assessment methods and criteria	Subject passing criteria	Passing threshold			Percentage of the final grade		
	Exam	50.0%			50.0%		
	Midterm quoloqium	50.0%			50.0%
