

Subject card

Subject name and code	, PG_00044948						
Field of study	Mathematics						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2025/2026		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Zakład Równań Różniczkowych i Zastosowań Matematyki -> Instytut Matematyki Stosowanej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Robert Krawczyk					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	15.0	0.0	60
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	60	5.0	35.0	100		
Subject objectives	The use of mathematical tools in selected methods of signal analysis; identifying and solving problems related to signal processing and mathematical modeling of phenomena from other fields of science and engineering.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K6_U06	The student applies the acquired mathematical knowledge in signal analysis.			[SU3] Assessment of ability to use knowledge gained from the subject		
	K6_U08	The student applies the acquired mathematical knowledge in issues related to signal analysis, data analysis and optimization.			[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		
	K6_K03	Students in groups of 2-3 people carry out project tasks related to signal analysis.			[SK4] Assessment of communication skills, including language correctness [SK1] Assessment of group work skills		
	K6_U05	The student analyzes the known methods of signal processing and reconstruction and uses them in various cases; constructs and critically evaluates mathematical models.			[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		
	K6_W03	The student learns the basic concepts of system identification, mathematical modeling and sampling theory. The student combines knowledge of mathematics with knowledge of other fields.			[SW1] Assessment of factual knowledge		

Subject contents	The concept of mathematical model, signal and identification. Continuous- and discrete-time Fourier transform (CTFT and DTFT), frequency spectrum of the signal. LTI and impulse response systems. The concepts of sampling, quantizing and filtering of the signal. The sampling process and the relation between CTFT of a continuous signal and DTFT of its sampled signal. Shannon-Nyquist sampling theorem in signal reconstruction. Bohr almost periodic functions: definition and basic properties. Generalized trigonometric polynomial and Fourier series. Continuous almost periodic signals as sums of periodic signals. Wavelet transform, Haar wavelets.		
Prerequisites and co-requisites	Knowledge from courses: Mathematical Analysis, Linear Algebra and Differential equations. Additionally: selected topics of Functional Analysis and Measure Theory/Probability.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Test in practical exercises	50.0%	30.0%
	Project	50.0%	30.0%
	Passing lecture classes (Quiz on eNauczanie and Final Test)	50.0%	40.0%

	eResources addresses		
Example issues/ example questions/ tasks being completed	Calculate CTFT transform of a given signal. Nyquist rate. Almost periodic signal. Autocorrelation function. Haar system. Examples of causal and non-causal LTI systems.		
Work placement	Not applicable
