Subject card

Subject name and code	Elementary Mathematics, PG_00047357					
Field of study	Informatics					
Date of commencement of studies	October 2023		Academic year of realisation of subject		2023/2024	
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies		Mode of delivery		at the university	
Year of study	1		Language of instruction		Polish	
Semester of study	1		ECTS credits		6.0	
Learning profile	general academic profile		Assessment form		exam	
Conducting unit	Mathematics Center -> Vice-Rector for Education					
Name and surname of lecturer (lecturers)	Subject supervisor		dr Magdalena Musielak			
	Teachers		mgr Magdalena Kamer-Plichta mgr inż. Wojciech Dąbrowski mgr inż. Dorota Żarek dr Magdalena Musielak mgr Mariusz Kaczmarek			

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	60	6.0	84.0	150

Subject objectives	Students obtain competences in the range of using methods of elementary mathematics.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study and perform tasks, in an innovative way, in not entirely predictable conditions, by:n- appropriate selection of sources and information obtained from them, assessment, critical analysis and synthesis of this information,n- selection and application of appropriate methods and toolsn	Student uses the methods of elementary mathematics to formulate and solve simple problems in other areas of mathematics and informatics	[SU4] Assessment of ability to use methods and tools
	[K6_W01] Knows and understands, to an advanced extent, mathematics necessary to formulate and solve simple issues related to the field of study	Student names the basic properties of elementary functions and plots their graphs. Student solves equations and inequalities with elementary functions. Student costructs inverse functions of exponential, logarytmic, trygonometric and cyclometric functions. Student solves exercises involving infinite sequences. Student understands the notion of a continuous function and uses limits of functions to determine continuity.	[SW1] Assessment of factual knowledge

Subject contents	The set of real numbers and its subsets. The absolute value of a real number. Bounded sets and their upper and lower bounds. The continuity axiom of real numbers set. The Newton binomial. Functions and their properties. Domain and co-domain, the graph of a function. Transformations of function graphs. Monotone, even and periodic functions. Injection, surjection and bijection. Countable and uncountable sets. Function composition. The inverse function. Operations on polynomials. The roots and factorization of a polynomial, Bezout"s theorem. Rational roots of a polynomial with integer coefficients. Rational functions, equations and inequalities. Factorization of a rational function into partial fractions. Power functions. Equations and inequalities with irrational functions. Exponential functions, equations and inequalities. The exp(x) function. Hyperbolic functions. Logarithms and their properties. The decimal and natura logarithm. Logarithmic functions as inverses of exponential functions. Logarithmic equations and inequalities. The measure of angles in radians and degrees. Trigonometric functions of an arbitrary angle. Graphs of trigonometric functions. Trigonometric formulas and identities. Trigonometric equations and inequalities. Cyclometric functions. Operations on vectors. Vectors in a two-dimensional coordinate system.The length of a vector. Scalar (dot) product. Line on the plane (direction, normal, general and parametric equations). Circle, ellipse, parabola, hyperbola. Number sequences. The arithmetic and the geometric sequence. The sum of n terms of an arithmetic and a geometric sequence. The sum of an infinite geometric sequence. Conversion of decimal periodic fractions into common fractions. Sequences given with recurrent formulas. The limit of a sequence. Properties of convergent sequences. Limit of a function. Continuous functions and their properties.
Prerequisites and co-requisites	

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Final exam	50.0%	90.0%
	Work during tutorials	0.0%	10.0%

Recommended reading	Basic literature	Wikieł B. (red), Matematyka. Podstawy z elementami matematyki wyższej, Wydawnictwo Politechniki Gdańskiej
	Supplementary literature	W. Żakowski - Algebra i analiza matematyczna dla licealistów i kandydatów na wyższe uczelnie, WNT, Warszawa 1999 M.Bryński, N.Dróbka, K.Szymański, ,,Matematyka dla zerowego roku studiów wyższych. Elementy analizy matematycznej", Wydawnictwa Naukowo-Techniczne
	eResources addresses	Adresy na platformie eNauczanie: WETI (Informatyka) - Matematyka 2023/24 (M.Musielak) - Moodle ID: 31223 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=31223

Example issues/ example questions/ tasks being completed	1. Solve the inequality $(x^4 + x^2 - 10x)/(1 - \sin 2x) < 0$. 2. Solve the equation $9^{\log_3 \sin x} - 4^{1/2 + \log_2 \cos x} - \log_2 0,5 = 0$. 3. Find the domain, the set of values and sketch the graf of the function $f(x) = +1/2 \arcsin(1-2x)$. Determine the inverse function of f. 4. Evaluate $\tan(\arccos(2/3) + \cos(\arctan(2/3))$. 5. For the sequence $a_n = (3n)!/n^{3n}$ evaluate the limit $\lim_n (a_{n+1}/a_n)$. 6. Using the three-series theorem find the limit of the sequence $x_n = 2/(n^4+2) + 4/(n^4+4) + 6/(n^4+6) + ... + 2n/(n^4+2n)$
Work placement	Not applicable
