# GDAŃSK UNIVERSITY OF TECHNOLOGY

## Subject card

| | | | | | | |
|---|---|---|---|---|---|---|
| Subject name and code | Software Engineering, PG_00053894 | | | | | |
| Field of study | Informatics | | | | | |
| Date of commencement of studies | October 2023 | | Academic year of realisation of subject | | 2025/2026 | |
| Education level | first-cycle studies | | Subject group | | Obligatory subject group in the field of study | |
| | | | | | Subject group related to scientific research in the field of study | |
| Mode of study | Full-time studies | | Mode of delivery | | at the university | |
| Year of study | 3 | | Language of instruction | | Polish | |
| Semester of study | 5 | | ECTS credits | | 4.0 | |
| Learning profile | general academic profile | | Assessment form | | exam | |
| Conducting unit | Department of Software Engineering -> Faculty of Electronics, Telecommunications and Informatics | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | | dr inż. Aleksander Jarzębowicz | | | |
| | Teachers | | dr inż. Aleksander Jarzębowicz | | | |

| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
|---|---|---|---|---|---|---|---|
| | Number of study hours | 30.0 | 0.0 | 30.0 | 0.0 | 0.0 | 60 |
| | E-learning hours included: 0.0 | | | | | | |

| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | Participation in consultation hours | Self-study | SUM |
|---|---|---|---|---|---|
| | Number of study hours | 60 | 5.0 | 35.0 | 100 |

| | |
|---|---|
| Subject objectives | The course is focused on introducing to students the aspects of industrial software development: large systems, compliant to requirements of a specific customer, supporting business goals, providing a required level of quality characteristics, produced and maintained by large developers teams. |

| Learning outcomes | Course outcome | Subject outcome | Method of verification |
|---|---|---|---|
| | [K6_U43] can analyse date and formulate, apply and assess appropriate formal models and algorithms for solving problems in the field of information systems and applications | The student uses Unified Modeling Language to prepare the models of IT systems. | [SU1] Assessment of task fulfilment |
| | [K6_W06] Knows and understands the basic processes occurring in the life cycle of devices, facilities and systems specific to a given field of study. | The student understands the importance of engineering practices and organisation of teamwork in software projects. Enumerates and describes key areas of software development process. Explains the selection of practices for the specific software project. | [SW1] Assessment of factual knowledge |
| | [K6_U09] can carry out a critical analysis of the functioning of existing technical solutions and assess these solutions, as well as apply experience related to the maintenance of technical systems, devices and facilities typical for the field of studies, gained in the professional engineering environment | The student develops "Vision of IT system" document that includes a critical analysis of the present state of the customer organization as well as basic requirements and restrictions of the planned IT system. | [SU1] Assessment of task fulfilment |
| | [K6_U03] can design, according to required specifications, and make a simple device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment | The student develops analytical and design models of IT system using CASE (Computer Aided Software Engineering) software supporting tools. | [SU1] Assessment of task fulfilment |
| | [K6_W42] Knows and understands, to an advanced extent, architecture, design principles and methods of hardware and software support for local and distributed information systems, including computing systems, databases, computer networks and information applications, as well as the principles of human cooperation with computers and computer-aided teamwork | The student understands the issues of IT systems design (on both architectural and module level), including software reuse and user interface design. | [SW1] Assessment of factual knowledge |

| Subject contents | 1. Introduction<br>2. Scope and subject of software engineering. Essential motivations and concepts.<br>3. Planning and defining scope of software project. Rich Picture.<br>4. Areas of software engineering - an overview<br>5. Conceptual modelling. Languages for modelling and specification.<br>6. Use cases<br>7. Object-oriented analysis using UML<br>8. Modelling of logical system structure: class diagrams<br>9. Modelling of system structure: other structural diagrams<br>10. Modelling system dynamics: sequence and communication diagrams<br>11. Modelling system dynamics: representing object"s state<br>12. System design: system architecture<br>13. System design: high-level design<br>14. System design: class design (low level)<br>15. Foundations of software quality. Metrics of object-oriented design.<br>16. Software reuse<br>17. Classical design patterns<br>18. Other patterns (Internet Applications patterns, analysis patterns, architectural patterns, management patterns)<br>19. Risk and social responsibility related to IT systems<br>20. Requirements engineering: requirements determination<br>21. Requirements engineering: requirements specification<br>22. User interface design: motivations, terms, techniques<br>23. User interface design: Nielsen"s heuristics and examples<br>24. Software testing: terms, place in software development process<br>25. Software testing: techniques (black/white box), levels of testing, managing tests<br>26. Software reviews and inspections<br>27. Software deployment<br>28. Software usage and maintenance<br>29. Configuration management and software evolution<br>30. Classical (waterfall) software lifecycle model<br>31. Non-classical software lifecycles and development processes<br>32. Adjusting development process to particular software project context<br>33. Outline of software project management<br>34. Software development and management methodologies<br>35. Properties of plan-driven and agile development<br>36. CASE tools<br>37. Other tools supporting software engineering |
|---|---|
| Prerequisites and co-requisites | Presence during laboratory courses is mandatory. Delivery of all laboratory exercises and positive verification by tutor is required to pass the lab. Delays in delivering exercises affects the assessments. Only students who pass the lab are entitled to write the exam. |

| Assessment methods and criteria | Subject passing criteria | Passing threshold | Percentage of the final grade |
|---|---|---|---|
| | Lab (assignments & tests) | 50.0% | 50.0% |
| | Written exam | 50.0% | 50.0% |
