

表 GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

0 ,		Artificial Intelligence, PG_00047668						
October 2023		Academic year of realisation of subject			2024/2025			
first-cycle studies		Subject group			Obligatory subject group in the field of study Subject group related to scientific			
					research in the field of study			
Full-time studies		Mode of delivery			at the university			
2		Language of instruction			Polish			
4		ECTS credits			5.0			
general academic profile		Assessment form			exam			
Department of Comp	Department of Computer Architecture -> Faculty of Electronics, Telecommunications and Informatics							
Subject supervisor		dr hab. inż. Julian Szymański						
Teachers	Teachers dr hab. inż. Julian Szymański							
Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
Number of study hours	30.0	0.0	15.0	15.0		0.0	60	
							0.00	
Learning activity			Participation in consultation hours		Self-study		SUM	
Number of study hours	60	2.0		63.0		125		
A goal of the course is to teach students the basic paradigms of artificial intelligence with particular emphasis on neural networks, genetic algorithms and fuzzy logic.								
Course outcome		Subject outcome			Method of verification			
[K6_U06] can analyse the operation of components, circuits and systems related to the field of study, measure their parameters and examine technical specifications					[SU1] Assessment of task fulfilment			
[K6_W05] Knows and understands, to an advanced extent, methods of supporting processes and functions, specific to the field of study		knows methods of neural network training		[SW1] Assessment of factual knowledge				
1. Organization of the course and assessment criteria 2. Definitions of AI, overview of methods and applications 3. Philosophy of AI 4. Graph searching methods: breadth first, depth-first, Dijkstra, A* 5. Graph searching methods: ant colony optimization 6. AND/OR graph searching methods: introduction 7. AND/OR graph searching methods: minimax and alpha-beta pruning methods 8. AND/OR graph searching methods: computer chess 9. Knowledge representation and reasoning: introduction to first order logic 10. Knowledge representation and reasoning: introduction to first order logic 10. Knowledge representation and reasoning: trames and description logic 13. Fuzzy inference systems: Mamdani and Sugeno inferences 14. Bayesian networks: overview and types of applications 15. Bayesian networks: methods of computing of probabilities 16. Machine learning: overview of types of learning, algorithms of learning and learned structures 17. Machine learning: gradient and Levenberg Marquardt algorithms 18. Machine learning: random search and simulated annealing algorithms 19. Machine learning: evolutionary algorithms 20. Machine learning: genetic programming 21. Machine learning: particle swarm optimization 22. Machine learning: artificial immune system algorithms 23. Machine learning: artificial neural networks - supervised learning 25. Artificial neural networks - recurrent networks 26. Machine learning: generalisation problems, VC dimension and Vapnik inequality 29. Reinforcement learning: overview and types of multistage decision processess 30. Reinforcement learning: reinforcement learning: overview and types of multistage decision processess 30. Reinforcement learning: reinforcement learning: overview and types of multistage decision processess 30. Reinforcement learning: reinforcement learning algorithms 31. Unsupervised learning: clustering algorithms and self-organizing features maps
