

Subject card

Subject name and code	Compiler Design, PG_00047891						
Field of study	Informatics						
Date of commencement of studies	October 2023	Academic year of realisation of subject				2025/2026	
Education level	first-cycle studies	Subject group				Optional subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	3	Language of instruction				Polish	
Semester of study	5	ECTS credits				2.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Department Of Intelligent Interactive Systems -> Faculty Of Electronics Telecommunications And Informatics -> Wydział Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Jan Daciuk				
	Teachers		dr hab. inż. Jan Daciuk				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	The aim of the subject is acquisition of skills writing translators, especially compilers, for high level programming languages, as well as understanding their functioning. On completion of the subject, the students should be able to write parsers for a wide range of source codes using scanner generators and parser generators.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_W03] knows and understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum		Knows definitions and taxonomy of grammars and formal automata. Can depict functioning of lexical analyzers, parsers, and semantic analyzers. Can explain compiler construction and the role of its components. Can show methods for code optimization. Uses regular expressions for developing scanners. Creates parsers for data and programs.			[SW1] Assessment of factual knowledge	
	[K6_U03] can design, according to required specifications, and make a simple device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment		Can design and develop simple parsers according to specification.			[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools	
Subject contents	1. Formal languages, grammars, Chomskys classification 2. Meta-languages, notion XBNF, automata 3. Translators kinds, models, structure 4. Regular grammars, regular expressions, finite automata 5. Lexical analysis 6. Scanners generators 7. Context-free grammars, deterministic automata 8. Syntactic analysis LR 9. Syntactic analysis LL 10. Parsers generators 11. Syntax-directed translation 12. Target environment, memory management 13. Semantic analysis, code generation and optimization 14. Translation and evaluation of logical-arithmetic expressions 15. Final exam						
Prerequisites and co-requisites							

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	51.0%	50.0%
	Presence and activity	51.0%	10.0%
	Colloquium	51.0%	40.0%
