

## Subject card

|   |  |  |                                     |            |  |         |     |
|---|--|--|-------------------------------------|------------|--|---------|-----|
| Subject name and code                       | DATABASES, PG_00058505   |  |                                     |            |  |         |     |
| Field of study                              | Economic Analytics   |  |                                     |            |  |         |     |
| Date of commencement of studies             | October 2023   | Academic year of realisation of subject  |                                     |            | 2024/2025  |         |     |
| Education level                             | first-cycle studies  | Subject group  |                                     |            | Obligatory subject group in the field of study<br>Subject group related to scientific research in the field of study |         |     |
| Mode of study                               | Full-time studies  | Mode of delivery   |                                     |            | at the university  |         |     |
| Year of study                               | 2  | Language of instruction  |                                     |            | Polish   |         |     |
| Semester of study                           | 3  | ECTS credits   |                                     |            | 4.0  |         |     |
| Learning profile                            | general academic profile   | Assessment form  |                                     |            | assessment   |         |     |
| Conducting unit                             | Department of Informatics in Management -> Faculty of Management and Economics   |  |                                     |            |  |         |     |
| Name and surname of lecturer (lecturers)    | Subject supervisor   | dr inż. Bartosz Woliński   |                                     |            |  |         |     |
|   | Teachers   |  |                                     |            |  |         |     |
| Lesson types and methods of instruction     | Lesson type  | Lecture  | Tutorial                            | Laboratory | Project  | Seminar | SUM |
|   | Number of study hours  | 15.0   | 0.0                                 | 30.0       | 0.0  | 0.0     | 45  |
|   | E-learning hours included: 0.0   |  |                                     |            |  |         |     |
| Learning activity and number of study hours | Learning activity  | Participation in didactic classes included in study plan                                 | Participation in consultation hours |            | Self-study   | SUM     |     |
|   | Number of study hours  | 45   | 10.0                                |            | 45.0   | 100     |     |
| Subject objectives                          | Designs and implements databases in accordance with theoretical and practical rules  |  |                                     |            |  |         |     |
| Learning outcomes                           | Course outcome   | Subject outcome  |                                     |            | Method of verification   |         |     |
|   | [K6_U07] uses information technologies to improve data analysis and decision-making processes  | implements databases based on defined requirements                                       |                                     |            | [SU4] Assessment of ability to use methods and tools<br>[SU1] Assessment of task fulfilment                          |         |     |
|   | [K6_W02] demonstrates comprehensive preparation in the field of methods, techniques for formulating and solving problems   | applies the principles of requirements modeling and IT system design to create databases |                                     |            | [SW3] Assessment of knowledge contained in written work and projects   |         |     |
| Subject contents                            | Designing an information system. Place the design in the life cycle of the system. The methodology for designing and modeling. Designing databases as part of management information systems.<br>Engineering requirements.<br>Identification of processes and functions (analysis of function).<br>The logical process model.<br>Modeling the flow of information.<br>Data modeling.<br>The logical data model based on "case study."<br>Optimizing data model.<br>The physical data model.<br>Modeling Interface.<br>Process model stages.<br>Using CASE tools, database schema generation.<br>RDBMS MS SQL Server use to create databases.<br>Design of input and output.<br>Advanced SQL (structured query language) used for creating, modifying databases, and to place and retrieve data from databases. |  |                                     |            |  |         |     |
| Prerequisites and co-requisites             |  |  |                                     |            |  |         |     |
| Assessment methods and criteria             | Subject passing criteria   | Passing threshold  |                                     |            | Percentage of the final grade  |         |     |
|   | Project  | 60.0%  |                                     |            | 60.0%  |         |     |
|   | Practical exercise   | 80.0%  |                                     |            | 30.0%  |         |     |
|   | Final test   | 75.0%  |                                     |            | 10.0%  |         |     |
