

Subject card

Subject name and code	Control engineering, PG_00058308						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2023		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Jacek Zawalich				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		3.0		27.0	75
Subject objectives	The aim of the course is to provide theoretical and practical knowledge in the field of construction, design and maintenance of automated posts and processes in an industrial environment with the use of professional hardware and software engineering.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W07] has basic knowledge related to control and automation systems		Student identifies and classifies typical technical objects. The student presents the basic methods of modeling and simulation of objects, processes and control systems. The student knows the methods of designing simple control systems of various physical quantities in industrial conditions.		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U07] can build and analyze models of systems and systems in the field related to control systems and automation		The student solves tasks in the field of design, modeling and simulation of objects, processes, systems and control systems. The student freely uses simulation programs in the field of object modeling and control systems. The student develops programs to be implemented in PLCs or industrial computers.		[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject		
Subject contents	LECTURE						
	Classification of control and regulation. Examples of industrial control systems. Control object models, the sensing elements and implementing their properties, static and dynamic characteristics. Methods for identifying industrial, systems, components and controls. Structure of an industrial control systems. Types of industrial control devices. The choice of control devices, measuring and implementing technical designs. Criteria for assessing control complex control and regulation systems. Examples of applicable solutions to complex control systems and control systems in the industry. Designing automation systems.						
	LABORATORY						
	Identify and develop models of selected objects, the choice of regulator, measuring devices and actuators, designing of automatic control systems using PLC.						

Prerequisites and co-requisites	Knowledge of Fundamentals Automation		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Colloquium	50.0%	60.0%
	Reports of laboratory exercises	100.0%	40.0%

	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	Prepare model of the temperature control of the water tank. Perform the analysis stability control system in the reservoir water level with a delay. Design a heating control system in the warehouse for storage of vegetables and fruits. Prepare a lift control algorithm in a four-storey building.		
Work placement	Not applicable
