

Subject card

Subject name and code	Microprocessor Engineering, PG_00038098						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Andrzej Kopczyński					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	60	8.0		57.0	125	
Subject objectives	Understanding the basic concepts and issues concerning the operation of microcontrollers and microprocessor systems. Getting to know the methods and tools for programming microprocessors and their peripherals.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_K02] can work in a group taking on different roles in it	Student can work in group and use specialized tools for family 8051 and ARM microprocessors for creation and starting programs.			[SK1] Assessment of group work skills		
	[K6_U01] can obtain information from literature, databases and other sources; integrate the information obtained, interpret it and draw conclusions, formulate and justify opinions	Student is able to applicate a proper literature and develop simple programs using C language an Assembler for microcomupers 8051 family and ARM Cortex M3.			[SU1] Assessment of task fulfilment		
	[K6_W05] has basic knowledge of the principles of operation of basic electronic, energy and power electronic components and systems	Student explain the rules of microprocesor system work, distinguish base types of microprocesor systems architectures, describes base glases of memories and I/O uP system devices, knows base intefeaces.			[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	<p>LECTURE Microprocessor - the idea and history. Methods of data representation in microprocessor systems. Data encoding standards. Basic arithmetic and logical operations on binary data. Microprocessor system, the basic components and architecture. Internal structure and operating principle of a typical microprocessor. Programming in assembler and C language. Tools to build and run the software. Implementation of embedded software in the system. Microcontrollers from 8051 family: internal structure, modes of operation, the list of instructions. Characteristics of integrated peripheral components: ports, time-counters, interrupt controller, serial transmission system. Memory of microprocessor systems - types, characteristics, structure. Principles of cooperation between central processing unit, memory and I/O devices. Coupling of typical peripheral devices to the microprocessor. Methods of parallel and serial data transmission. Methods of measuring time and frequency. A/C and C/A converters. Microcontrollers of other families: AVR, PIC, ARM. Examples of the use of microcontrollers in automation systems.</p> <p>LABORATORY The aim of the laboratory is to acquire the practical skills of microcontroller programming and knowledge of tools used for this purpose. Laboratory classes consist of the preparation and testing of simple programs written in C and Assembler. The programs are tested on evaluation boards with microcontrollers from 8051 and STM32F1 family and typical elements of the input/output.</p>											
Prerequisites and co-requisites	<ol style="list-style-type: none"> 1. Basic knowledge of digital technology. 2. Ability to program in C language. 											
Assessment methods and criteria	<table border="1" data-bbox="451 611 1487 712"> <thead> <tr> <th data-bbox="451 611 794 645">Subject passing criteria</th> <th data-bbox="794 611 1137 645">Passing threshold</th> <th data-bbox="1137 611 1487 645">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="451 645 794 678">Practical exercise</td> <td data-bbox="794 645 1137 678">60.0%</td> <td data-bbox="1137 645 1487 678">50.0%</td> </tr> <tr> <td data-bbox="451 678 794 712">Written exam</td> <td data-bbox="794 678 1137 712">60.0%</td> <td data-bbox="1137 678 1487 712">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Practical exercise	60.0%	50.0%	Written exam	60.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Practical exercise	60.0%	50.0%										
Written exam	60.0%	50.0%
