|---|--|--|---|-------------------------------------|--|------------|-----|
| Subject name and code | Mathematics I, PG_00022416 | | | | | | |
| Field of study | Electrical Engineering | | | | | | |
| Date of commencement of studies | October 2023 | | Academic year of realisation of subject | | 2023/2024 | | |
| Education level | first-cycle studies | | Subject group | | Obligatory subject group in the field of study | | |
| Mode of study | Full-time studies | | Mode of delivery | | at the university | | |
| Year of study | 1 | | Language of instruction | | Polish | | |
| Semester of study | 1 | | ECTS credits | | 6.0 | | |
| Learning profile | general academic profile | | Assessment form | | exam | | |
| Conducting unit | Mathematics Center -> Vice-Rector for Education | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | | dr Anna Niewulis | | | | |
| | Teachers | | mgr Justyna Woron | | | | |
| | | | mgr Katarzyna Kiepiela | | | | |
| | | | dr Anna Niewulis | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 30.0 | 30.0 | 0.0 | 0.0 | 0.0 | 60 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | | Participation in consultation hours | | Self-study | SUM |
| | Number of study hours | 60 | | 10.0 | | 80.0 | 150 |
| Subject objectives | The aim of this subject is to obtain the students competence in the range of using the basic methods of mathematical analysis and linear algebra. Furthermore, the student is able to use this knowledge to solve simple theoretical and practical problems that can be found in the field of engineering. | | | | | | |
| Learning outcomes | Course outcome | | Subject outcome | | Method of verification | | |
| | K6_W01 | | Student explains the concept of limit and continuity of functions. Student evaluates the limits of functions. Student defines the basic concepts of differential calculus of one variable function. Student determines intervals of monotonicity of a given function and it's extreme. Student uses the first and second derivatives of a function to analyze its properties. Student applies the basic rules and techniques of integration to calculate indefinite integrals. Student gives the graphic interpretation of definite integral. Student examines the convergence of improper integrals. | | [SW1] Assessment of factual knowledge | | |
| | K6_U01 | | Student is able to process the acquired information, analyze and interpret it, draw conclusions and reason opinions. Student understands the need of lifelong learning and improving their engineering knowledge. | | [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools | | |
| | K6_K02 | | Student is able to work individually and in a group, knows how to estimate the time needed to carry out the task, and is able to implement the work schedule. | | [SK3] Assessment of ability to organize work [SK1] Assessment of group work skills | | |

| | | | |
|--|--|--|-------------------------------|
| Subject contents | Limits and continuity: Infinite sequences. Fundamental definitions of limit of sequence, convergence and divergence, limit theorems. Applications to solving equations. Differential calculus of functions with one variable and applications of differential calculus of functions with one variable: Definition of first derivative and differential. Roll s and Lagrange s theorems. Higher derivatives and differentials. Monotonicity and local extrema. Convexity, concavity and inflexion points of a function. De l Hospital s Theorem. Taylor s Theorem. Asymptotes. Applying differential calculus to studying the properties of functions with one variable. Integral calculus of one variable functions indefinite integral: Basic methods and ways of integration - integration by parts and substitution. Integration of rational functions, trigonometric and irrational. Definite integrals in Riemann s sense: Newton-Leibnitz Theorem. Integration formulas, the substitution method of integration and integration by parts for definite integrals. Applications of integral calculus to computing areas of plane figures, lengths of arcs, volumes of solids of revolution. Improper integral: Definition. Types of integrals. | | |
| Prerequisites and co-requisites | Knowledge of the subject: Propedeutics to Mathematics | | |
| Assessment methods and criteria | Subject passing criteria | Passing threshold | Percentage of the final grade |
| | Written exam | 50.0% | 50.0% |
| | Midterm colloquium | 50.0% | 50.0% |

| Example issues/ example questions/ tasks being completed | 1. Calculate limits $\lim_n ((2n-1)/(2n+3))^{2n+2} \lim_{x \rightarrow 1} (x^3-1)/(x^4-1)$. 2. Calculate derivatives or multiple derivatives $(\ln(5x)+ \ln(x^2)+\tan(x) \cos(x))'$, $(xe^x)''$. 3. Find the largest and the smallest value of the function $f(x)=2/x -2 + x$ for x in $[1,4]$. Also discus its monotonicity. 4. Find the inflection points and intervals of concavity/covexity for $f(x)=-x^4 +12x^3 -48x^2 +60x +1$. 5. Give two examples of applications of denite integrals, draw diagrams (if needed). 6. Find the area of a region between two curves: $y=x^2$ and $x=y^2$. | | |
| Work placement | Not applicable | | |
