

Subject card

Subject name and code	High Voltage Engineering, PG_00038442						
Field of study	Electrical Engineering						
Date of commencement of studies	October 2023		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Marek Olesz				
	Teachers		dr inż. Daniel Kowalak dr hab. inż. Marek Olesz				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		7.0		48.0	100
Subject objectives	Knowledge of phenomena occurring in high-voltage insulation systems using gaseous, liquid and solid dielectrics. Introduction to lightning and surge protection. Typical insulation solutions used for electricity distribution. Measuring systems in high voltage technology. Mastering measurement procedures related to performing voltage tests on insulation systems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_W02		- defines the conditions under which an electric discharge may occur in gas, solid and liquid insulation, - defines basic lightning and surge protection systems - defines the features of insulation solutions in the field of cables, insulators, transformers		[SW1] Assessment of factual knowledge		
	K6_U05		- selects measuring equipment and testing systems - performs basic measurements confirming the electrical strength of the insulating system - calculates safe insulation distances		[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject		
	K6_K01		- independently expands knowledge in the field of high-voltage technology towards the classification and construction of high-voltage systems		[SK2] Assessment of progress of work [SK5] Assessment of ability to solve problems that arise in practice		

Subject contents	LECTURE Dielectrics, ionisation processes in gases, forms of discharges, corona, impulse air strength, effect of field distribution, polarity, symmetry, dimensions, time and frequency on electric strength of gases. Compressed gases. Liquid dielectrics, effect of pressure, temperature, humidity, time and frequency, field distribution and electrode dimension on electric strength, applications. Solid dielectrics, mechanisms of breakdown, partial discharges, degradation, dielectric strength of composed insulation systems, surface and gliding discharges. Insulators, application, design, effect of field distribution, pollution and humidity, design of HV power cables and terminations. Lightning, basic parameters, overvoltages, propagation of waves in power lines and windings, principles and methods of lightning protection, co-ordination of insulation. Principles of diagnostics of insulation. LABORATORY Measurement of AC, DC and impulse high voltages. Effect of voltage distribution on discharge form in air at AC, DC and impulse voltages. Effect of ambient conditions on electric strength of air. Insulator testing in dry conditions and under rain. Oil evaluation, Model investigations of wave phenomena in long lines.		
Prerequisites and co-requisites	acquaintance with principles of differential ordinary and partial equations, integral calculus, theory of electric fields, kinetic-molecular theory of gases, principles of thermodynamics, and structure of atom		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory passing test	60.0%	40.0%
	Written exam	60.0%	60.0%
