

关。GDAŃSK UNIVERSITY 创 OF TECHNOLOGY

Subject card

Subject name and code	Electromobility I, PG_00058349							
Field of study	Hydrogen Technologies and Electromobility							
Date of commencement of studies	October 2023		Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study		
						Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	2		Language of instruction			Polish		
Semester of study	4		ECTS credits			4.0		
Learning profile	general academic profile		Assessment form			exam		
Conducting unit	Department of Electri	Department of Electrical Engineering of Transport -> Faculty of Electrical and Control En				ontrol Engineer	ing	
Name and surname	Subject supervisor	dr hab. inż. Leszek Jarzębowicz						
of lecturer (lecturers)	Teachers							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0		0.0	45
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	45		6.0		49.0		100
Subject objectives	The student learns the characteristics of independently-powered and hybrid electric vehicles found in road and rail transportation, as well as marine, aviation, and military and space applications. Acquires skills in programming an autonomous electric vehicle and its driving functions. The student is able to select the type and capacity of energy storage for a given vehicle and its driving cycle. Evaluates the environmental impact of a vehicle with a given propulsion system. Estimates the cost of implementation and operation of electromobility solutions.							
Learning outcomes	Course outcome		Subject outcome			Method of verification		
	[K6_W16] has knowledge of the current state and the latest development trends related to the field of study.		The student is able to select the type and capacity of energy storage that allows the vehicle to meet the range and driving profile requirements.			[SW3] Assessment of knowledge contained in written work and projects		
	[K6_W10] knows the principles of the processing, use and rational use of electricity, including the principles of electric traction in various transport systems		The student is able to justify the selection of an energy storage unit for a vehicle, taking into account economic and environmental aspects, as well as the applicability of the solution.			[SW2] Assessment of knowledge contained in presentation		
	[K6_U12] can formulate a specification of simple engineering tasks of a practical nature related to the field of study		The student knows the techniques of energy-efficient driving (eco- driving) and can use them to reduce the energy intensity of the vehicle.			[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W15] he has knowledge of the construction, principles of operation and operation of electromagnetic energy converters used in transport systems and systems.		The student knows the structures of drive and power systems of electric vehicles.			[SW1] Assessment of factual knowledge		

Subject contents	LECTURE: Energy intensity of catenary hybrid electric vehicles; Vehicular and stationary energy storage. BMS and EMS systems. Vehicle fuel cell converters and controls. Powertrain structures of electric and hybrid vehicles. Methods of assessment of the energy intensity of electric and hybrid vehicles. Micromobilit Economic and environmental consequences of electromobility development. Electromobility in marine, aerospace and military technology. Unusual applications of electromobility - levitating vehicles, mobile robots, exoskeletons and nanorobots.							
Prerequisites and co-requisites	Basic knowledge of electrical engineering, electronics and computer science.							
Assessment methods	Subject passing criteria	Passing threshold Percentage of the final grade						
and criteria	Exam	60.0%	60.0%					
	Preparation for the exercise, Report submission	60.0% 40.0%

	Auresy na platformie elvauczanie:							
example issues/ example questions/ tasks being completed								
	2. Discuss the definition of a hybrid vehicle, give examples using power train block diagrams.							
	3. Outline the advantages and disadvantages of using fuel cells to power vehicles							
	4. Discuss the impact of electromobility on the carbon footprint of transportation. What is the CO2 equivalent emissions?							
Work placement	Not applicable
