

## Subject card

|   |  |  |   |                                     |  |            |     |
|---|--|--|---|-------------------------------------|--|------------|-----|
| Subject name and code                       | Planning of experiments, PG_00058346   |  |   |                                     |  |            |     |
| Field of study                              | Hydrogen Technologies and Electromobility  |  |   |                                     |  |            |     |
| Date of commencement of studies             | October 2023   |  | Academic year of realisation of subject |                                     | 2024/2025                                      |            |     |
| Education level                             | first-cycle studies  |  | Subject group                           |                                     | Obligatory subject group in the field of study |            |     |
| Mode of study                               | Full-time studies  |  | Mode of delivery                        |                                     | at the university                              |            |     |
| Year of study                               | 2  |  | Language of instruction                 |                                     | Polish   |            |     |
| Semester of study                           | 3  |  | ECTS credits                            |                                     | 3.0  |            |     |
| Learning profile                            | general academic profile   |  | Assessment form                         |                                     | assessment                                     |            |     |
| Conducting unit                             | Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics   |  |   |                                     |  |            |     |
| Name and surname of lecturer (lecturers)    | Subject supervisor   |  | dr hab. inż. Sebastian Molin            |                                     |  |            |     |
|   | Teachers   |  | dr inż. Maciej Haras                    |                                     |  |            |     |
|   |  |  | dr hab. inż. Sebastian Molin            |                                     |  |            |     |
| Lesson types and methods of instruction     | Lesson type  | Lecture  | Tutorial                                | Laboratory                          | Project  | Seminar    | SUM |
|   | Number of study hours  | 15.0   | 0.0                                     | 0.0                                 | 15.0   | 0.0        | 30  |
|   | E-learning hours included: 0.0   |  |   |                                     |  |            |     |
| Learning activity and number of study hours | Learning activity  | Participation in didactic classes included in study plan |   | Participation in consultation hours |  | Self-study | SUM |
|   | Number of study hours  | 30   |   | 5.0                                 |  | 40.0       | 75  |
| Subject objectives                          | The aim of the course is to familiarise students with the subject of Design of Experiments. The methods presented will enable better preparation for creative work, enabling the methodical construction of experiments on issues encountered in engineering work. |  |   |                                     |  |            |     |

|  |  |  |  |
|--|--|--|--|
| Learning outcomes  | Course outcome   | Subject outcome  | Method of verification   |
|  | [K6_U03] can prepare and present a presentation on the problems and results of an engineering task   | The student is able to present selected research findings in a systematic and critical manner, outlining the rigorous methodology adopted to carry out the research.   | [SU5] Assessment of ability to present the results of task   |
|  | [K6_K02] can work in a group taking on different roles in it   | The student is able to fulfil specific roles in a group and is comfortable with group work, where separation of tasks and continuous supervision of duties is crucial.   | [SK1] Assessment of group work skills  |
|  | [K6_W11] knows and understands mathematics at an advanced level to the extent necessary to formulate and solve simple issues related to the field of study   | Students will understand the mathematical methods used in the analysis of experimental data, be able to critically analyse them and identify possible other methods.   | [SW3] Assessment of knowledge contained in written work and projects   |
|  | [K6_U09] is able to use their knowledge in the field of programming methods and techniques and select and apply appropriate programming methods and tools in creating computer software or programming devices or controllers using microprocessors or programmable elements or systems, characteristic for a given field of study   | The student is able to select an appropriate tool for the preparation of the planned experimental work   | [SU4] Assessment of ability to use methods and tools   |
|  | [K6_U01] Is able to obtain information from literature, databases and other sources, integrate them, interpret them and draw conclusions and formulate opinions; has the ability to self-educate m.in. in order to improve professional competences  | Students will be able to critically review specialist literature on modern experimental design methods.  | [SU3] Assessment of ability to use knowledge gained from the subject<br>[SU2] Assessment of ability to analyse information |
| Subject contents   | 1. Introduction. Final objectives of the experiment: better understanding of the phenomenon, parameter estimation, prediction of system behaviour.2. Non-linearity of systems with respect to parameters, with respect to excitation. Examples3. Definitions of qualitative and quantitative experiment planning.4. qualitative experiment planning. Structural traceability of systems. Example.5. Methods and tools for qualitative experiment planning. Example.6. quantitative experiment planning. The variables of an experiment. The importance of Fisher's information matrix.7. Experiment optimality criteria: D, A, C and E-optimality.8. Interpretation, practical significance and numerical complexity of the D, A, C and E-optimality criteria.9. Application of quantitative experiment planning methods. Optimisation of the SP sampling scheme.10. Application of quantitative experiment planning methods. Optimisation of the excitation u(t).11. the OSSP scheme. Examples of SP optimisations. Experiment duration vs. distribution of optimal samples.12. optimisation of u(t). Ties and constraints. Interpretation.13. UOPT scheme. Example optimisations.14. effect of additional constraints on the excitation signal on the optimal solution15. optimal organisation of the measurement process. |  |  |
| Prerequisites and co-requisites                          |  |  |  |
| Assessment methods and criteria                          | Subject passing criteria   | Passing threshold  | Percentage of the final grade  |
|  | Final test   | 60.0%  | 100.0%   |
