

Subject card

Subject name and code	Planning of experiments, PG_00058346						
Field of study	Hydrogen Technologies and Electromobility						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Sebastian Molin					
	Teachers	dr inż. Maciej Haras dr hab. inż. Sebastian Molin					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	5.0		40.0	75	
Subject objectives	The aim of the course is to familiarise students with the subject of Design of Experiments. The methods presented will enable better preparation for creative work, enabling the methodical construction of experiments on issues encountered in engineering work.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U03] can prepare and present a presentation on the problems and results of an engineering task	The student is able to present selected research findings in a systematic and critical manner, outlining the rigorous methodology adopted to carry out the research.	[SU5] Assessment of ability to present the results of task
	[K6_K02] can work in a group taking on different roles in it	The student is able to fulfil specific roles in a group and is comfortable with group work, where separation of tasks and continuous supervision of duties is crucial.	[SK1] Assessment of group work skills
	[K6_W11] knows and understands mathematics at an advanced level to the extent necessary to formulate and solve simple issues related to the field of study	Students will understand the mathematical methods used in the analysis of experimental data, be able to critically analyse them and identify possible other methods.	[SW3] Assessment of knowledge contained in written work and projects
	[K6_U09] is able to use their knowledge in the field of programming methods and techniques and select and apply appropriate programming methods and tools in creating computer software or programming devices or controllers using microprocessors or programmable elements or systems, characteristic for a given field of study	The student is able to select an appropriate tool for the preparation of the planned experimental work	[SU4] Assessment of ability to use methods and tools
[K6_U01] is able to obtain information from literature, databases and other sources, integrate them, interpret them and draw conclusions and formulate opinions; has the ability to self-educate m.in. in order to improve professional competences	Students will be able to critically review specialist literature on modern experimental design methods.	[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information	
Subject contents	1. Introduction. Final objectives of the experiment: better understanding of the phenomenon, parameter estimation, prediction of system behaviour. 2. Non-linearity of systems with respect to parameters, with respect to excitation. Examples. 3. Definitions of qualitative and quantitative experiment planning. 4. Qualitative experiment planning. Structural traceability of systems. Example. 5. Methods and tools for qualitative experiment planning. Example. 6. Quantitative experiment planning. The variables of an experiment. The importance of Fisher's information matrix. 7. Experiment optimality criteria: D, A, C and E-optimality. 8. Interpretation, practical significance and numerical complexity of the D, A, C and E-optimality criteria. 9. Application of quantitative experiment planning methods. Optimisation of the SP sampling scheme. 10. Application of quantitative experiment planning methods. Optimisation of the excitation $u(t)$. 11. The OSSP scheme. Examples of SP optimisations. Experiment duration vs. distribution of optimal samples. 12. Optimisation of $u(t)$. Ties and constraints. Interpretation. 13. UOPT scheme. Example optimisations. 14. Effect of additional constraints on the excitation signal on the optimal solution. 15. Optimal organisation of the measurement process.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Final test	60.0%	100.0%
Recommended reading	Basic literature	1. Kalicka R. "Metody projektowania eksperymentu", 2010. 2. Khoo M., Physiological control systems, analysis, simulation, estimation, IEEE Press 2002. 3.
