

Subject card

Subject name and code	Electric Machines, PG_00038436						
Field of study	Hydrogen Technologies and Electromobility						
Date of commencement of studies	October 2023		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Power Electronics and Electrical Machines -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Michał Michna				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		8.0		57.0	125
Subject objectives	Get acquainted with constraction, theory and application of electric machines and transformers.						
	Getting to know the structures and elements of electric drive systems.						
	Verification of the theory in the laboratory						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_K02] can work in a group taking on different roles in it	Student organizes work in a team. Student chooses the appropriate methods of solving problem. Student exchanges information with the team members. Student uses technical language. Student knows how to estimate the time needed to complete task. Student is able to implement the work schedule.	[SK1] Assessment of group work skills [SK3] Assessment of ability to organize work [SK4] Assessment of communication skills, including language correctness
	[K6_K01] is aware of the need for continuous education and self-improvement in the field of the profession of an electrician and knows the possibilities of further education	Student understands the importance of constantly expanding their knowledge and skills regarding electrical machines and their applications. Student can use up-to-date technical documentation and publications for this purpose	[SK5] Assessment of ability to solve problems that arise in practice
	[K6_W06] knows the construction and operation of transformers, electrical machines, low and high temperature electrolyzers, electrical drive systems, their modeling and industrial applications	Student explains the general principles of construction and physical basics of electric machines, Student explains the construction, operation and modeling of transformers, student draws and explains the characteristics of transformers, student explains the construction, operation and modeling of DC machines, student draws and explains the characteristics of DC machines, student explains the construction, operation and modeling of synchronous machines, student draws and explains the characteristics of synchronous machines, student explains the construction, operation and modeling of induction machines, student draws and explains the characteristics of induction machines, student explains the general principles of designing electrical machines	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects
	[K6_K04] can react in abnormal and emergency situations, threats to health and life when using automation and robotics components and systems in hydrogen devices and installations	Student explains the principles of health and safety. Student applies the principles of health and safety. Student is able to react in emergency situations	[SK3] Assessment of ability to organize work [SK4] Assessment of communication skills, including language correctness
Subject contents	<p>LECTURE: Types and ways of producing magnetic fields.. Generation of electromagnetic torque and induced voltages. Electrical machines and material technology. Classification of electrical machines. Design, principle of operation and properties of single and three-phase transformers. Design, principle of operation and properties of dc and ac machines.General principles of regulating the speed of electric motors. Control properties of rotating generators. LABORATORY Transformer properties. Characteristics of asynchronous motor fed from converter and power system. Characteristics of shunt direct current motor and generator. Characteristics of synchronous generator and parallel works at power system.</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical exercise reports	60.0%	40.0%
	Writing, practical and oral exam	50.0%	60.0%
