

Subject card

Subject name and code	Digital Signal Processing, PG_00038275						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Metrology and Information Systems -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Ariel Dzwonkowski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	20.0	0.0	10.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		6.0		39.0	75
Subject objectives	The aim of the course is to introduce students to the subject of digital signal processing.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_W03		The student knows the types of signals and their characteristics The student has knowledge about the methods of frequency analysis of signals. The student has knowledge about the types of filters and methods of their design. The student knows the algorithms of multidimensional signal processing.		[SW1] Assessment of factual knowledge		
	K7_U07		Student is able to evaluate signal parameters. The student can apply the frequency analysis algorithms. The student is able to design filters and verify the correctness of their operation. The student is able to analyze multidimensional signals.		[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools		
Subject contents	LECTURE The types of signals. Processing A / D and D / A circuits sample & hold S & H. Aliasing. Continuous and Discrete Fourier Transform. Correlation and autocorrelation signals. Filtration signals. Filters of finite and infinite impulse response - how it works, musical, design. Hilbert transform. STFT and wavelet analysis, the basis and application. Two-dimensional signal processing. Examples of applications of digital signal processing. LABORATORY Introduction to Digital Signal Processing in LabVIEW. Sampling, quantization, signal reconstruction, aliasing, spectral analysis. Filters of finite and infinite impulse response. Adaptive filtering. Time-frequency analysis (STFT, wavelet analysis).						
Prerequisites and co-requisites	Basic knowledge of mathematical analysis.						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory - Practical exercise	60.0%	40.0%
	Lecture - midterm colloquium	60.0%	60.0%

	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	1. How are they made and what they are sample & hold circuits? 2. What is aliasing? 3. Types of digital filters. 4 What is the Fourier transform for discrete signals? 5. What is the STFT analysis? 6. Describe the properties of parametric Kaiser window. 7. Introduce an example of practical use of digital signal processing.		
Work placement	Not applicable
