

Subject card

Subject name and code	Basics of Mechanics, PG_00047526							
Field of study	Automatic Control, Cybernetics and Robotics							
Date of commencement of studies	October 2023		Academic year of realisation of subject		2024/2025			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study		
						Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	2		Language of instruction		Polish			
Semester of study	4		ECTS credits		3.0			
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Department of Mechanics and Mechatronics -> Faculty of Mechanical Engineering and Ship Technology							
Name and surname	Subject supervisor		dr hab. inż. Krzysztof Lipiński					
of lecturer (lecturers)	Teachers		dr hab. inż. Krzysztof Lipiński					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	0.0	0.0		45
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	45		3.0		27.0		75
Subject objectives	To familiarize studentheorems of statics. I know the stress-strain bending and torsion. statically determinable kinematics and dynamics.	The introduction relationship, a Presentation o e and indeterm	n of methods for and the concept f methods of de inable systems	or modeling slice ots of allowable etermining the	ling fricti stress i stresses	ion and n tensi s and lir	rolling resist le elements, ne deflection	ance. Get to compression, of beams, for

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W02] Knows and understands, to an advanced extent, selected laws of physics and physical phenomena as well as methods and theories explaining the complex relationships between them, constituting the basic general knowledge in the field of technical sciences related to the field of study	Student prepares physical models of real objects. Student presents basic concepts, principia and laws of statics and kinematics. Student replaces constraints by reaction forces and torques. Student writes equilibrium conditions for concurrent planar systems of forces, he/she calculates reactions at the supporting points. Student writes equilibrium conditions for general planar systems of forces. Student determines friction forces for sliding friction, belt friction and rolling resistance. Student writes equilibrium conditions for concurrent spatial systems of forces. Student writes equilibrium conditions for general spatial systems of forces. Student writes equilibrium conditions for general spatial systems of forces. Student determines gravity forces and coordinates of gravity centers. Student determines limit stresses for tension, compression, bending, torsion. Student determines diagrams of bending and torsion moments for beams. Student determines second moments of area of the beam cross-section. Student determines deflection line for beams, he/she solves statically indeterminate beams. Student determines will determines to states. Student determines states. Student determines relations between position, velocity and acceleration of the particle. Student determines relations between velocities of different point of a rigid body. Student presents basic concepts, principia and laws of dynamics. Student solves practical problems referring to dynamics of particles. Student evaluates work, power, kinematical energy and potential energy of particles. Student determines linear momentum and angular momentum and angular momentum of bodies. Student solves practical problems referring to dynamics of particles. Student evaluates work power, kinematical energy and potential energy of bodies, he/she used these terms to solve practical problems referring to dynamics of particles and bodies.	[SW1] Assessment of factual knowledge

	[K6_U02] can perform tasks related to the field of study in an innovative way as well as solve complex and nontypical problems, applying knowledge of physics, in changing and not fully predictable conditions	Students solve elementary, non- typical and innovative problems of statics and kinematics Students solve elementary, non- typical and innovative problems of strength of materials: he determines stress and strain of simple deformable elements Students solve elementary, non- typical and innovative problems of dynamics of mechanical systems	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools				
Subject contents	Information on the organization of the course. Bibliography. Historical overview. Mechanics and its main topics. Modeling in mechanics. Concepts of real object, physical model, mathematical model, algorithm. Concepts of rigid body, material particle, concentrated force. Newton's laws. Primitive notions and axioms. Equivalent systems of forces. Net force for a concurrent et of forces. Torque about a point and about an axis. Net force for a set of two parallel forces. A couple of forces and its torque. Net torque for a concurrent and general set of forces. Main net force and main net torque. Degrees of freedom, constraints, reactions. Statically determinable system of forces, statically undeterminable system of forces, mechanisms. Statics. Basic concepts. Equilibrium conditions for planar systems. Particular cases of systems and their equilibrium conditions: concurrent system so forces parallel system of forces. Alternative equilibrium conditions. Principle of independent actions of forces (principle of superposition). Origins of the forces: internal and external forces. Gravity forces and coordinates of the gravity centers. Static momentum of inertia. Sliding friction, belt friction, rolling resistance. Strain/stress characteristics. Limit stresses for tension, compression, bending, torsion, Hook law, Young modulus, termall stresses, factor of saferty. Diagrams of bending and torsion moments for beams. Secend moments of area of the beam cross-section. Deflection line for beams, statically indeterminate beams. Yield stresses in uniaxial tension for complex stress statees. Kinematics of a point: basic concepts and principles: position velocity acceleration, motion equations, trajectory. Description of the motion equations with Cartesian coordinates, polar coordinates, cylindrical coordinates, spherical coordinates and acceleration. Particular cases of motion of the point: rectilinear uniform motion. Rectilinear motion net coordinates. Tangent and normal acceleration. Particular cases of motion of the point: rectil						
Prerequisites and co-requisites		Completed course of Mathematics Completed course of Physics Main attention set on basic knowledge about geometry, trigonometry, vector calculus (analysis), matrix calculus, abilities in integrations and					
Assessment methods			abilities in integrations and
