

Subject card

Subject name and code	Basics of Programming, PG_00047377						
Field of study	Biomedical Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Algorithms and Systems Modelling -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr Paweł Obszarski					
	Teachers	mgr inż. Andrzej Jastrzębski dr Paweł Obszarski dr hab. inż. Robert Janczewski dr hab. inż. Iwona Kochańska mgr inż. Kacper Wereszko dr inż. Joanna Raczek mgr inż. Jan Glinko mgr inż. Bazyli Gielniak dr inż. Marcin Strąkowski dr inż. Andrzej Marczał dr inż. Katarzyna Karpienko dr inż. Maciej Wróbel dr inż. Bartłomiej Dec					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	20.0	0.0	65
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	65	10.0		50.0	125	
Subject objectives	This course is an introduction to computer programming. Its primary objective is to teach solving of programming problems and writing programs using the C++ programming language.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	The student knows the constructs of a high-level programming language. He is able to interpret and analyze programs written in a high-level programming language. The student knows the rules for selection of programming methods and language constructs.	[SW1] Assessment of factual knowledge
	[K6_U05] can plan and conduct experiments related to the field of study, including computer simulations and measurements; interpret obtained results and draw conclusions	Student writes simple programs to support the process of solving problems related to the field of his studies.	[SU1] Assessment of task fulfilment
	[K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study	The student analyzes and solves basic programming problems. The student uses high-level programming language constructs that are syntactically and semantically correct. He writes and modifies programs in a high level language. Identifies and removes the causes of program malfunctions. He explains and can apply basic programming techniques.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
Subject contents	<ol style="list-style-type: none"> 1. Introduction. 2. Programming languages, alphabet, syntax and semantics. Translation. 3. Classification of data types. Integer and floating point types. Arithmetic expressions and operators. Selected standard mathematical functions. 4. Character type. Casting of types. 5. Logical type. Logical operators and expressions. 6. Input/output basics. 7. Conditional statements (if, switch) and conditional expression. 8. Iteration statements (for, while, do-while), nested iterations. 9. Defining types. Constants. Enumerated type. 10. One- and multi-dimensional arrays. Null-terminated strings. 11. Basic rules for scope and lifetime of variables. 12. Functions. Scope and lifetime of variables. Side effect. 13. Passing parameters of a function. 14. Pointer type and pointer arithmetics. 15. Pointers for inter-function communication. 16. Dynamic memory allocation. 17. Basic dynamic data structures. 18. Structures (records). 19. Data structures using records and their applications. 20. Applications of dynamic data structures (stacks, queues, graph structures) 21. Introduction to object oriented programming. 22. Defining classes (constructor, destructor, data and function members). 23. Applications object-oriented programming paradigm. 24. Input/output streams classes. Input/output formatting. 25. Processing files. 26. Applications of recurrence (e.g., divide and conquer, greediness, dynamic programming). 		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project assignments (1-2)	50.0%	30.0%
	Final test	50.0%	40.0%
	Programming lab assignments (1-3)	50.0%	30.0%
