

Subject card

Subject name and code	Embedded Systems, PG_00047844						
Field of study	Biomedical Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2025/2026		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Adam Bujnowski					
	Teachers	dr inż. Adam Bujnowski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	30	3.0		42.0		75
Subject objectives	To familiarize students with construction, and programming of the embedded systems. The input and output stages and the control unit types. A typical input and output data methods will be shown. Exemplary problems related with the constriction of microprocessor systems, microcontrollers, programmable chips (FPGA) , SoC, SoM's and examples of the control algorithms. During the laboratory the practical knowledge will be presented covering the area of typical input/output control and typical algorithms.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U03] can design, according to required specifications, and make a simple device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student is able to design control system on the basis of given specification Student is able to design and implement control algorithm for designed system			[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		
	[K6_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	Student is able to create applications for embedded systems. Student understands and knows specific methods for implementing and applying code for embedded systems. Student knows specific tools for programming of embedded systems			[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U07] can apply methods of process and function support, specific to the field of study	Student can write software for medical data acquisition Student can design circuit for controlling of the selected physical parameter (pressure, temperature, etc.)			[SU1] Assessment of task fulfilment [SK5] Assessment of ability to solve problems that arise in practice [SU4] Assessment of ability to use methods and tools		

Subject contents	<p>Principal definitions - embedded system,</p> <p>Requirements criteria for the embedded systems</p> <p>Operating systems of the embedded systems</p> <p>Available hardware platforms for the embedded systems</p> <p>CPU's for the embedded systems, microcontrollers, SoC's etc.</p> <p>Typical CPU architectures - Intel, ARM, MIPS</p> <p>Methods of reliability improvements</p> <p>Application creation for the embedded systems</p> <p>Power supply in the embedded systems</p> <p>Application testing and debugging in the embedded systems</p> <p>Interfaces and IO system in the embedded systems</p> <p>Typical applications for the embedded systems</p>											
Prerequisites and co-requisites	<p>Programming (C,C++)</p> <p>Digital circuits basics</p> <p>Principles of electronics</p>											
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="453 1274 794 1308">Subject passing criteria</th> <th data-bbox="799 1274 1141 1308">Passing threshold</th> <th data-bbox="1145 1274 1492 1308">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="453 1314 794 1348">final writing</td> <td data-bbox="799 1314 1141 1348">50.0%</td> <td data-bbox="1145 1314 1492 1348">50.0%</td> </tr> <tr> <td data-bbox="453 1355 794 1379">laboratory achievements</td> <td data-bbox="799 1355 1141 1379">50.0%</td> <td data-bbox="1145 1355 1492 1379">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	final writing	50.0%	50.0%	laboratory achievements	50.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
final writing	50.0%	50.0%										
laboratory achievements	50.0%	50.0%
