

Subject card

Subject name and code	Methods of Experiment Design, PG_00049346						
Field of study	Biomedical Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	4	Language of instruction			Polish		
Semester of study	7	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Sebastian Molin					
	Teachers	dr hab. inż. Sebastian Molin					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	2.0		18.0	50	
Subject objectives	The aim of the course is to familiarize students with methods allowing for optimal design of the experiment.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U02] can perform tasks related to the field of study in an innovative way as well as solve complex and nontypical problems, applying knowledge of physics, in changing and not fully predictable conditions		The student know how to plan experiments using advanced methods and understands the tools and methodologies.		[SU4] Assessment of ability to use methods and tools		
	[K6_W01] Knows and understands, to an advanced extent, mathematics necessary to formulate and solve simple issues related to the field of study		The student can use mathematics/statistic tools and can present the data in a rigorous way.		[SW2] Assessment of knowledge contained in presentation		
Subject contents	1. Introduction. The final goals of the experiment: a better understanding of the phenomenon, parameter estimation, prediction of system behavior. 2. Nonlinearity parameters of the system, the arousal. Examples 3. Definitions of qualitative and quantitative planning of the experiment. 4. Quality planning experiment. Structural traceability systems. Example. 5. Methods and tools for qualitative planning of the experiment. Example. 6. Quantitative planning of the experiment. The variables of the experiment. The importance of the Fisher information matrix. 7. Optimality criteria of the experiment: D, A, C and E-optimality. 8. Interpretation, practical importance and complexity of the numerical criteria for D, A, C, and E-optimality. 9. The use of quantitative methods for experiment planning. Optimization of sampling scheme SP. 10. The use of quantitative methods for experiment planning. Optimization of excitation $u(t)$. 11. OSSP program. Sample optimization SP. The duration of the experiment and the optimal distribution of samples. 12. Optimization of $u(t)$. Ties and limitations. Interpretation. 13. UOPT Program. Examples of optimizations. 14. Impact of additional constraints in enhancing the signal to an optimal solution 15. The optimal organization of the measurement process						
Prerequisites and co-requisites	No requirements						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Written exam		50.0%		100.0%
