

Subject card

Subject name and code	Databases Basics, PG_00047534						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Adam Bujnowski					
	Teachers	dr Tomasz Neumann mgr inż. Magdalena Madej mgr inż. Natalia Szarwińska dr inż. Adam Bujnowski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	Basic terms: database, data model, database management system. Fundamental data models - flat file, hierarchical, networking and relational data models. Designing of the relational databases. Management of the databases using SQL. Relational algebra. Functions, triggers in the modern DBMS. Transactions. Connection to the database from procedural languages.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study	Student knows and identified data models Student knows how to design relational database	[SU1] Assessment of task fulfilment
	[K6_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	Student knows basics of the SQL language Student applies SQL statements within languages like C/C++ and PHP	[SW3] Assessment of knowledge contained in written work and projects
	[K6_W01] Knows and understands, to an advanced extent, mathematics necessary to formulate and solve simple issues related to the field of study	Student knows basics of mathematical set theory Student applies basic operations on sets	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects
Subject contents	Principal terms - data, information, knowledge, database, DBMS, data model. Layered model of database system, Data model vs data structure, Flat databases, Relation between entities, hierarchical model, network data model, XML as a hierarchical database, Relational data model - structure of the data, Data integrity in relational databases, Graphical notations of the RDB structure, Normalisation, Designing of the relational databases, SQL - genesis, usage of the SQL, classification. Data definition language, Data types in SQL, Data manipulation language, tuple selection statements, SELECT - data retrieval, SQL - privileges, user and database management, Aggregate functions, User defined functions, triggers, transactions, additional SQL forms - comments, Backup copies of the data, Data access methods - using procedural languages. Object data model.		
Prerequisites and co-requisites	Basic skills in computing. Programming in C/C++		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	final writing	50.0%	40.0%
	laboratory achievements	50.0%	60.0%
Recommended reading	Basic literature	Davies, Database systems Matthews Stones, Databases and PostgreSQL Rumiński, Bujnowski,	
	Supplementary literature	Sharon Allen, Projektowanie baz danych, Helion www.postgresql.org	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	Design the database structure of ... (shop / library etc...) Using the SQL language implement database, manage data and analyse data with result presentation Using PHP and www technology create the interface to the database		
Work placement	Not applicable
