

Subject card

Subject name and code	Basics of Physics, PG_00058905								
Field of study	Informatics								
Date of commencement of studies	October 2023		Academic year of realisation of subject			2023/2024			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study			
					Subject group related to scientific research in the field of study				
Mode of study	Part-time studies		Mode of delivery			at the	at the university		
Year of study	1		Language of instruction			Polish	Polish		
Semester of study	1		ECTS credits			6.0	6.0		
Learning profile	general academic profile		Assessment form			exam	exam		
Conducting unit	Department of Physic	s of Electronic	Phenomena ->	> Faculty of Ap	plied Ph	nysics a	nd Mathema	tics	
Name and surname	Subject supervisor		dr inż. Ireneusz Linert						
of lecturer (lecturers)	Teachers		dr inż. Ireneu	r inż. Ireneusz Linert					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
	Number of study hours	30.0	15.0	0.0	0.0		0.0	45	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation i classes include plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	45	12.0		93.0		150		
Subject objectives	The aim of the course is to acquaint students with the issues of electrodynamics, wave optics, quantum properties of radiation and the structure of matter.								
Learning outcomes	Course out	Subject outcome			Method of verification				
	[K6_W02] Knows and understands, to an advanced extent, selected laws of physics and physical phenomena as well as methods and theories explaining the complex relationships between them, constituting the basic general knowledge in the field of technical sciences related to the field of study		the basic and the complex phenomena, concepts and laws concerning the basics of physics and modern physics. Student solves simple problems of classical mechanics, statistical physics and			[SW1] Assessment of factual knowledge [SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment			
	[K6_U02] can perform related to the field of innovative way as we complex and nontypit applying knowledge changing and not full conditions								

Data wydruku: 19.05.2024 23:16 Strona 1 z 2

Heat, work, internal energy, gas transformations. Elements of kinetic theory of gases. Entropy, reversible and non-reversible processes. Laws of thermodynamics. Harmonic oscillators, addition of oscillators. Elastic waves. Basic properties of acoustic waves. Energy density and intensity of view. Parameters of the medium, wave impodance. Elements of geometrical optics. The wave nature of light Huygen's principle, interference, Young's double—site experiment. Officiation grating, interference by thin films, polarization. Malvass law, Brevetter phenomena. Electric field. Coulomb's law, the electric field, the electric flux, Gauss's law, the work done by the electric field, electric polarization. Malvass law, Brevetter phenomena. Electric field. Coulomb's law, the electric dipole. Capacitors. Electric current electric current, the current density, drift speed, resistivity, conductivity, resistor, resistor is resisted and parallel, the work, power. EMF, Kinchhoff's rules. Magnetic field: the magnetic field, force on an electric charge in magnetic field, cyclotron resonance frequency, force on electric current in a magnetic field, right hand rule, Ampereas law, Biot Savarts law. Electrodynamics: Farada's laws, induced EMF, induction, Maxwell's equations. Electrodynamics: Farada's laws, induced EMF, induction, Maxwell's equations. Electromagnetic oscillations and waves: oscillations in LC circuit, oscillations in open electric circuit, radiation of oscillating dipole, properties of electromagnetic waves, electromagnetic spectrum, energy in EM waves, energy flow and Poynting vector. Quantum properties of radiation: blackbody radiation, the emissivity. Kirchhoff's law, Stefan-Botzman's law, Vien's law, Planck's quantum hypothesis, photoelectric effect, Compton's effect. Structure of matter: early models of the atom, spectral analysis. Basis of solid physics: electrical properties of solid state, band theory of solids, pn junction, light emitting diode, transition, plantic electronics. **Chrowledge of the basi	Subject contents	Kinematics and dynamics of a material point. Principle of conservation of energy. Principle of conservation of momentum and angular momentum. Basic properties of gravitational field. Elements of mechanics of fluids.						
field, electric potential, the electric dipole. Capacitors. Electric current, electric durent, the current density, drift speed, resistivity, conductivity, resistor, resistors in series and parallel, the work, power, EMF, Kirchhoff's rules. Magnetic field: the magnetic field, force on an electric charge in magnetic field, cyclotron resonance frequency, force on electric current in a magnetic field, right hand rule, Amperegs law, Biot-Savart's law. Electrodynamics: Farada's laws, induced EMF, induction, Maxwell's equations. Electromagnetic oscillations and waves: oscillations in LC circuit, oscillations in open electric circuit, radiation of oscillating dipole, properties of electromagnetic waves, electromagnetic spectrum, energy in EM waves, energy low and Poyning vector. Quantum properties of radiation: blackbody radiation, the emissivity, Kirchhoff's law, Stefan-Boltzman's law, Wien's law, Planck's quantum hypothesis, photoelectric effect, Compton's effect. Structure of matter: early models of the atom, spectral analysis. Basis of quantum mechanics: wave nature of matter. Davisson-Germer experiment, wave function, Schrödinger equation, Heisenberg uncertainty principle, tunneling phenomena. Basis of solid physics: electrical properties of solid state, band theory of solids, pn junction, light emitting diode, transistor, plastic electricals properties of solid state, band theory of solids, pn junction, light emitting diode, transistor, plastic electricals. Frerequisites Assessment methods and co-requisites Knowledge of the basic laws of physics, the ability to use calculus, basic knowledge of handling simple measuring instruments (ammeter, voltmeter). Subject passing criteria Passing threshold Percentage of the final grade Lecture credit 50.0% 60.0% Midterm tests 50.0% 1. Holiday, R.Resnick, J.Walker, Podstawy fizyki, T.1 - T.5, PWN, Warszawa (2003, 2, Cz.
