

SDAŃSK UNIVERSITY 的 OF TECHNOLOGY

Subject card

Subject name and code	Databases, PG_00058851							
Field of study	Informatics							
Date of commencement of studies	October 2023		Academic year of realisation of subject		2024/2025			
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study			
					Subject group related to scientific research in the field of study			
Mode of study	Part-time studies		Mode of delivery			at the	at the university	
Year of study	2		Language of instruction		Polish			
Semester of study	4		ECTS credits		5.0			
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Department of Geoinformatics -> Faculty of Electronics, Telecommunications and Informatics							
Name and surname	Subject supervisor		dr hab. inż. Zbigniew Łubniewski					
of lecturer (lecturers)	Teachers		dr hab. inż. Zbigniew Łubniewski					
			dr inż. Marek Kulawiak					
			mgr inż. Tomasz Idzi					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	30.0	0.0	15.0	0.0		0.0	45
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	activity Participation in d classes included plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	45		6.0		74.0		125
Subject objectives	To familiarize students with creating and management of relational databases .							

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W03] Knows and understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	Student knows the pronciples of construction and operation of computer systems.	[SW1] Assessment of factual knowledge
	[K6_W43] Knows and understands, to an advanced extent, standards and methods of IT systems administration, monitoring of processes occurring in them and immunising them to undesirable phenomena and activities	Student knows the principles of designing, creating and managing a database.	[SW1] Assessment of factual knowledge
	[K6_W41] Knows and understands, to an advanced extent, the operation and evaluation criteria of data processing, storage and transfer methods, including computational algorithms, artificial intelligence and data mining	Student knows the methods of administrating and managing the database.	[SW1] Assessment of factual knowledge
	[K6_U42] can apply tools and methods of designing, optimization, monitoring, management, increasing reliability and protection from safety hazards in local and distributed information systems and applications	Student is able to design and implement data security mechanisms, including user authorization and authentication.	[SU4] Assessment of ability to use methods and tools
	[K6_U07] can apply methods of process and function support, specific to the field of study	Student is able to adequatly design a secure database system, depending on the specific needs of the user.	[SU2] Assessment of ability to analyse information

Subject contents	1 Database system architecture
Subject contents	1. Database system architecture
	2. Functions of a Database Management System (DBMS)
	3. Entity sets, entity attributes, entity keys, relationships
	4. Entity relationship diagrams (ERDs) - general concepts
	5. Creating entity relationships diagrams 6. Ralational database - definitions
	7. Integrity rules: enitity integrity, referential integrity
	8. From an entity relationship diagram to a relational database schema
	9. Relational algebra: set-theoretic operators
	10. Relational algebra: relational operators
	11. SQL - an overview, origins, standards
	12. Creating tables
	13. Populating tables with data
	14. Simple queries
	15. SQL expressions - simple and conditional
	16. Queries with aggregate functions
	17. Queries with grouping
	18. Queries with joins
	19. Queries with outer joins
	20. Nested queries
	21. Queries for UPDATEs, deletes and bulk inserts
	22. Views, operations on views, updatable views
	23. Cursors, sequential processing of query results
	24. Normalization of relational databases: 2nd and 3rd normal form
	25. Boyce-Codd normal form
	26. Normalization of relational databases: 4th and 5th normal form

30. Rules for development of correct database applications in concurrent environments 31. Identification, authenticatrion and authorization in databases 32. Authorization of SQL operations on data: views, GRANT and REVOKE statements Prerequisites and co-requisites and criteria No requirements Subject passing criteria Passing threshold Percentage of the final grade Practical exercise Practical exercise 50.0% 40.0% Writter test 50.0% 50.0% Presence 0.0% 10.0% Recommended reading Basic literature P. Beynon-Davies. "Systemy baz danych". WNT 2000. Supplementary literature K. Goczyła, A. Landowska, M. Piechówka, "Bazy danych". MNT 2000. Supplementary literature K. Goczyła, A. Landowska, M. Piechówka, "Bazy danych". Materiały do wykładu. Gdańsk, 2009 Resources addresses Adresy na platformie eNauczanie: Example issues/ example questions/ tasks being completed Creating a relational database schema based on the entity relationship diagram. Verification normal form of the database. Developing SQL commands for creating and modifying objects in a relational database. Developing SQL commands to obtain data from a relational database. Developing SQL commands to obtain data from a relational database.		 27. Transactional processing in databases - basics 28. Isolation levels in transactions 29. Transactional processing and SQL standards 				
and co-requisites Assessment methods and criteria Subject passing criteria Passing threshold Percentage of the final grade Practical exercise 50.0% 40.0% Written test 50.0% 50.0% Presence 0.0% 10.0% Recommended reading Basic literature P.
