

## 。 GDAŃSK UNIVERSITY OF TECHNOLOGY

## Subject card

Subject name and code	Telecommunications, PG_00046328								
Field of study	Electronics and Telecommunications, Informatics, Automatic Control, Cybernetics and Robotics								
Date of commencement of studies	October 2023		Academic year of realisation of subject			2023/2024			
Education level	second-cycle studies		Subject group			Obligatory subject group in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			English			
Semester of study	1		ECTS credits			5.0			
Learning profile	general academic profile		Assessment form			exam			
Conducting unit	Department of Teleinformation Networks -> Faculty of Electronics, Telecommunications and Informatics						formatics		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Bartosz Czaplewski							
	Teachers		dr inż. Bartosz Czaplewski						
			dr hab. inż. Sławomir Ambroziak						
			drinż Woiciech Siwicki						
		mgr inz. кетigiusz мапуліак							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	ct Seminar		SUM	
	Number of study hours	20.0	0.0	20.0	0.0		0.0	40	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	40		17.0		68.0		125	
Subject objectives	Acquainting with the basics of operation of modern telecommunications systems.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K7_U06] can analyse the operation of components, circuits and systems related to the field of study; measure their parameters; examine technical specifications; interpret obtained results and draw conclusions		The student is able to carry out simple experiments, perform research and analyze the results in the field of telecommunications.			[SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment			
	[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum		Student identifies, classifies and describes the basic concepts, problems and challenges of the area telecommunications.			[SW1] Assessment of factual knowledge			

Subject contents	Lecture:1. Basic concepts: telecommunications, information, information sources, signal, telecommunicationsservice, telecommunications system, telecommunications channel, telecommunications network.2. The telecommunications system and functions of its elements; open and feedback system.3. Description of analog signals in the domain of time and frequency; logarithmic measures of the signallevel.4. Transmission media (open space, conductive lines, optical fiber) and their parameters; transmission of signals in the base band and in the higher frequency band.5. Analog modulation and demodulation; modulation of amplitude, frequency and phase; synchronous andasynchronous demodulation.6. Disturbances (noise, crosstalk, echo, multi-path) and distortions (linear and non-linear); reasons for theirformation and general properties. 7. Processing analog signals into digital form; sampling, quantization, coding.8. Quantization noise, compression and speech signal expansion.9. Source coding, source entropy, lossy and lossless compression; classification of coding and compressionmethods.10. Telecommunication channel: analogue, digital; properties, interference and distortion, channel capacity, Shannon's theorem.11. Transmission of digital signals in the basic band; transmission codes and their properties.12. Channel and corrective coding, detection and correction of errors.13. Multiplexing as a technique for maximizing the use of transmission resources; multiplexing: FDM, TDM, WDM, CDM and SDM.14. ISO / OSI layered model of equipment and systems cooperation; application of this model intelecommunications.15. Telecommunications.18. Access networks and core networks.19. The evolution of the Internet network to the operator's network of telecommunications services.20. Next generation networks - NGN and NGI.Laboratory:1. Pulse code modulation (PCM).2. Properties of selected transmission lines.3. Transmission codes and modulations.4. Detection and correction of errors in digital systems.5. Sampling, quantization and compression, an						
Prerequisites and co-requisites							
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade				
	test - part 1	50.0%	30.0%				
	test - part 2	50.0%	30.0%				
	measurement reports - part 1	50.0%	20.0%				
	measurement reports - part 2	50.0%	20.0%				
Recommended reading	Basic literature	1.Lathi B.P.: Modern Digital and Analog Communication Systems,Oxford University Press, 20092.Sklar B.: Digital Communications, Pearson Educations, 20013.Schneier B.: Applied Cryptography: Protocols, Algorithms, andSource Code in C, 1996
