

Subject card

Subject name and code	Digital Control, PG_00047403						
Field of study	Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			English		
Semester of study	3	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Decision Systems and Robotics -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Zdzisław Kowalczyk					
	Teachers	prof. dr hab. inż. Zdzisław Kowalczyk					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	2.0		18.0	50	
Subject objectives	The aim of the course is to master the knowledge of methods for modeling of dynamic processes as objects subject to automatic control and the control design methods, as well as complex (Z) transformations.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_U21] can individually carry out an in-depth analysis of controlling, diagnostics and signal processing problems; and, to an advanced extent, is able to individually design, tune and operate automatic regulation, control and robotics systems; and use computers to control and monitor dynamic systems	Student gets acquainted with the basic problems of modelling computer-controlled systems and designing systems of direct digital control.			[SW1] Assessment of factual knowledge		
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student is able to design and make a device or system, using methods, techniques and tools and materials, using standards and norms, using appropriate technologies			[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		
	[K7_W21] Knows and understands, to an advanced extent, methods and techniques of design and operation of automatic control systems, control and robotics systems, as well as the use of computers in the control and monitoring of dynamic objects	The student understands the methods and techniques of design and operation of automatic control systems and control and robotics, as well as the use of computers in the control and monitoring of dynamic objects			[SW1] Assessment of factual knowledge		

Subject contents	Basics of matrix algebra. Vectors, vector spaces and transformations. Linear transformations: linear mappings, base change and others (projections, rotations). Solving systems of equations. Problems of analysis and synthesis of digital control systems: Discretization and analogization; continuous and discrete modeling. Signal processing. Synthesis and analysis of mathematical models of control objects: discrete-time surrogate models. Spatial-state models.		
Prerequisites and co-requisites	Fundamentals of higher mathematics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	50.0%	100.0%
Recommended reading	Basic literature	W.L. Brogan: Modern control theory, Prentice Hall, Englewood Cliffs, 1974. K.J. Astrom, B Wittenmark: Computer-controlled systems. Prentice Hall, Upper Saddle River, 1997	
	Supplementary literature	There are no other literature requirements	
	eResources addresses	Adresy na platformie eNauzanie:	
Example issues/ example questions/ tasks being completed			
Work placement	Not applicable
