

Subject card

Subject name and code	Composite materials in the energy and transport, PG_00033868						
Field of study	Nanotechnology						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			1.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Solid State Physics -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Beata Bochentyn				
	Teachers		dr hab. inż. Beata Bochentyn				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		0.0		0.0	15
Subject objectives	<p>Presentation of the purpose and principles of composite materials fabrication.</p> <p>Presentation of different types of composites, their properties, fabrication methods, interactions between the components.</p> <p>Presentation of the methods of testing the structural and electrical properties of composite materials.</p> <p>Presenting examples of technological application of composites in transport and energy.</p>						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_W07		The student knows the methods of fabricating composite materials, knows their properties and characterisation methods.		[SW1] Assessment of factual knowledge		
	K6_W06		The student is able to explain the properties of composite materials and the interactions between components based on their structure and transport phenomena occurring in the materials.		[SW1] Assessment of factual knowledge		

Subject contents	<p>1. Composites - definition, classification, examples</p> <p><i>Structural properties of composites - testing and characterization</i></p> <p>1. Composites of required structural properties - the most important features; methods for preparing 2. Methods of test for structural properties of composites: SEM, EDX, SPM, nanoindentation</p> <p><i>Electrical properties of composites - testing and characterization</i></p> <p>1. The materials with mixed electrical conductivity (ion, proton, electron) 2. Percolation theory 3. Methods of mixed electrical conductivity testing</p> <p><i>The division of composite materials, properties, manufacturing method, the interaction between the components</i></p> <p>1. Polymer matrix composites 2. Metal matrix composites 3. A ceramic matrix composites 4. Composites with carbon fibers matrix 5. Superconducting matrix composites</p> <p><i>Areas of technological application of composite materials (transport, energy)</i></p>								
Prerequisites and co-requisites	Knowledge of basic physics.								
Assessment methods and criteria	<table border="1" data-bbox="448 974 1489 1048"> <thead> <tr> <th data-bbox="448 974 798 1010">Subject passing criteria</th> <th data-bbox="801 974 1141 1010">Passing threshold</th> <th data-bbox="1144 974 1489 1010">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 1014 798 1048">Written exam</td> <td data-bbox="801 1014 1141 1048">50.0%</td> <td data-bbox="1144 1014 1489 1048">100.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Written exam	50.0%	100.0%
Subject passing criteria	Passing threshold	Percentage of the final grade							
Written exam	50.0%	100.0%

Other scientific papers</p>
	eResources addresses	Adresy na platformie eNauczenie:
Example issues/ example questions/ tasks being completed	<p>1. Example of classification methods, and examples of composite materials belonging to each group</p> <p>2. The principles of designing composites and the resulting properties of the composite materials (+ examples)</p> <p>3. Percolation theory - basic issues</p> <p>4. Methods of mixed electrical conductivity testing</p>	
Work placement	Not applicable
