

Subject card

Subject name and code	Biochemistry, PG_00054745								
Field of study	ВІОСНЕМІА								
Date of commencement of studies			Academic year of realisation of subject			2025/2026			
Education level			Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the	at the university		
Year of study			Language of instruction			Polish	Polish		
Semester of study			ECTS credits			5.0	5.0		
Learning profile	general academic profile		Assessmer	Assessment form			assessment		
Conducting unit	Department of Pharmaceutical Technology and Biochemistry -> Faculty of Chemistry -> Wydziały Politechniki Gdańskiej								
Name and surname	Subject supervisor		dr hab. inż. Iwona Gabriel						
of lecturer (lecturers)	Teachers								
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
	Number of study hours	0.0	0.0	60.0	0.0		15.0	75	
	E-learning hours included: 0.0								
	Additional information: Laboratorium: studenci samodzielne wykonują eksperymenty biochemiczne przygotowane przez prowadzących i pod ich opieką. Seminarium: Studenci przygotowują indywidualne prezentacje naukowe i/lub popularno-naukowe o aktualnych zagadnieniach biochemii z zakresu materiału zaproponowanego przez prowadzącego i uzupełnionego przez studenta.								
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	75		8.0		42.0		125	
Subject objectives	semiarium; to exter field 2. laboratory: to exter together with the form	nd the general	biochemical kn	owledge and to	o learn t	he basi	c experimenta

Sudent expanded the blochemical factor field of enzymology, metabolism and genetic background by preparing flowly of preparing and giving a presentation. Sudent knows the basics of experimental work in blochemistry, including enzyme findicious, succession of experimental work in blochemistry, including enzyme findicious, succession of experimental work in blochemistry, including enzyme findicious, succession of experimental work in blochemistry, including enzyme findicious, succession of experimental work in blochemistry, including enzyme findicious, succession of experimental work, more declarated with the succession of experimental work in blochemistry, and succession of experimental work, more declarated with experimental and extended knowledge about the functioning of the programment in particular the importance of molecular the importance of molecular the importance of molecular the importance of molecular processes through the importance of molecular processes through the participation in the laboratory developed the participation in the laboratory secretices. It is the way to expand field of experimental work, means technical preparation to the laboratory secretices. It is the way to expend field of experimental work, means technical preparation to the laboratory secretices. It is the way to expend field of experimental work, means technical preparation to the laboratory secretices. It is the way to expend the processes through the participation and interpretation. 1. Microorganisms; current ideas in antibacterial drug resistance. The human microbion - bacterias friends. New patogens: fungl, fungal diseases for mammals. 2. Immunological system: for protecting against immunological diseases, how to predict their program to the resistance of heat shock proteins in our health. 3. Senescence: the reason of earliers death or the defence against tumor development, the function protein. 4. our current tasks in therapy of HIV. vaccines, DNA therapy, genetic resistance to HIV. 5. New attitude to antioxid	tion	Method of verification	Subject outcome	utcome	Course	Learning outcomes		
Subject contents Subject contents Subject contents	vartej w	faktograficznej [SW2] Ocena wiedzy zawart	knowledge in the field of enzymology, metabolism and genetic background by preparing					
extended knowledge about the functioning of living organisms [Signature]. Ocean wiedzy zaw fatking into account in particular the importance of molecular the importance of molecular the importance of molecular the importance of molecular the properties. K6_U05 Student reached the the new field of knowledge about the background of physiological participation in the laboratory exercises. It is the way to expand the student competency in the field of experimental work, means technical preparation to the laboratory experiments and results preparation to the laboratory experiments and results preparation and interpretation. Subject contents Course content – laboratory Seminars 1. Microorganisms: current ideas in antibacterial drug resistance. The human microbion - bacterias friends. New patogens. fungl. fungal diseases for mammals. 2. Immunological system: for protecting against immunological diseases, how to predict their prog the role of heat shock proteins in our health. 3. Senescence: the reason of earlier death or the defence against tumor development, the function protein. 4. our current tasks in therapy of HIV: vaccines, DNA therapy, genetic resistance to HIV. 5. New attitude to antioxidants and vitamins, are there free radicals toxic? for what there are in nat What is the unknown role of vitamin D? 6. Our nervous system: how to keep the continuous skillness? can we improve the brain skillness with the unknown role of vitamin D? 6. Our nervous system: how to keep the continuous skillness? can we improve the brain skillness be before the serious symptoms? Is it possible to come back with merihuana as a therapeutic ager Laboratory: Analytical methos of separation and identyfication of aminoacids. Methods of protein concentration The application of calorimetric methods in biochemistry. Physicochemical properties of proteins. Security parameters of enzymatic reactions. The cleaning of yeast inverses isolation of ligids from nutneg. Structural analysis of glicogene. Chrophile analysis by thin layer chr	ci rzędzi	[SU1] Ocena realizacji zada [SU4] Ocena umiejętności korzystania z metod i narzęc [SU2] Ocena umiejętności a informacji	experimental work in biochemistry,		K6_U03			
Subject contents	vartej w	faktograficznej [SW2] Ocena wiedzy zawart	extended knowledge about the functioning of living organisms, taking into account in particular the importance of molecular		K6_W06			
1. Microorganisms; current ideas in antibacterial drug resistance. The human microbion - bacterias friends. New patogens: fungi, fungal diseases for mammals. 2. Immunological system: for protecting against immunological disseases, how to predict their prog the role of heat shock proteins in our health. 3. Senescence: the reason of earlier death or the defence against tumor development, the function protein. 4. our current tasks in therapy of HIV: vaccines, DNA therapy, genetic resistance to HIV. 5. New attititude to antioxidants and vitamins, are there free radicals toxic? for what there are in nat What is the unknown role of vitamin D? 6. Our nervous system: how to keep the continuous skillness? can we improve the brain skillness v pharmaceuticals? what is the mechanism of Parkinson and Alzhaimer diseases? Can we protect a be before the serious symptoms? Is it possible to come back with merihuana as a therapeutic ager Laboratory: Analytical methos of separation and identyfication of aminoacids. Methods of protein concentration The application of calorimetric methods in biochemistry. Physiocochemical properties of proteins. Si separation of proteins. Kinetic parameters of enzymatic reactions. The cleaning of yeast inverase, isolation of lipids from nutmeg. Structural analysis of glicogene. Chrophile analysis by thin layer chromatography. Determination of vitamin C in the food	ci	[SU1] Ocena realizacji zada [SU4] Ocena umiejętności korzystania z metod i narzęc	of knowledge about the background of physiological processes through the participation in the laboratory exercises. It is the way to expand the student competency in the field of experimental work, means technical preparation to the laboratory technics, laboratory experiments and results		K6_U05			
1. Microorganisms; current ideas in antibacterial drug resistance. The human microbion - bacterias friends. New patogens: fungi, fungal diseases for mammals. 2. Immunological system: for protecting against immunological disseases, how to predict their prog the role of heat shock proteins in our health. 3. Senescence: the reason of earlier death or the defence against tumor development, the function protein. 4. our current tasks in therapy of HIV: vaccines, DNA therapy, genetic resistance to HIV. 5. 		and the individual instructions for the selected laboratory.		
		and the mulvidual institutions for the selected laboratory.		
	Supplementary literature	Students collect the literature data theirselves		
	eResources addresses			
Example issues/	Seminarium			
example questions/ tasks being completed				
g	1.The recent discoveries related to	the bacteria resistance against antybiotics.		
	2. The function of immunological sy	stem in warning against illness. Compare with the role chaperone		
	proteins.			
	3. Senescence: the cause of the organism aging or is it the defence against cancerogenesis? The role of mTOR proteis.			
	ITTOK proteis.			
	4. The current knowledge in the field of anty-HIV therapy: vaccine, DNA therapy, innate immunity.			
	4. The current knowledge in the nett of anty-riff therapy, vaccine, DNA therapy, inhate inimulity.			
	5. The new theories related to antyoxidants and vitamines. What is the role of free radical? they are really			
	harmfull?			
	6. The human nervous system: how increasing of brain conditions?	to keep its good efficiency, what would be the role of therapeutics in the		
	Laboratory			
	1. Which method would you apply for	or the aminoacids separation and identyfication?		
	2. Give the examples of the calorym	netric methods applications		
	3. Describe the SDS PAGE procedu	ure for the proteins separations		
	4. Characterize the parameters for t	he description of enzymation transformations.		
	5. What is the procedure for the ana	alysis of chlorophile in the for examle oak leave?		
Practical activites within	Not applicable
