| Subject name and code | , PG_00057766 | | | | | | |
| Field of study | Green Technologies | | | | | | |
| Date of commencement of studies | October 2023 | Academic year of realisation of subject | | | 2023/2024 | | |
| Education level | first-cycle studies | Subject group | | | Obligatory subject group in the field of study | | |
| Mode of study | Full-time studies | Mode of delivery | | | at the university | | |
| Year of study | 1 | Language of instruction | | | English | | |
| Semester of study | 2 | ECTS credits | | | 4.0 | | |
| Learning profile | general academic profile | Assessment form | | | assessment | | |
| Conducting unit | Department of Energy Conversion and Storage -> Faculty of Chemistry | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | dr inż. Michał Ryms | | | | | |
| | Teachers | | | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 15.0 | 0.0 | 0.0 | 30.0 | 0.0 | 45 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | | Participation in consultation hours | | Self-study | SUM |
| | Number of study hours | 45 | | 10.0 | | 50.0 | 105 |
| Subject objectives | Student is able to recreate spatial elements on a drawing plane, using orthogonal and axonometry, as well as cross-section projections. Is familiar with basic dimensioning guidelines and how to prepare technical drawings (working and assembly drawings). Student recognizes the tension strength in technology. Classifies, describes and draws the basic connections used in the chemical industry. Calculates the dimensions of the tank or installation. Recognises the basic types of valves and fittings found in chemical industry. | | | | | | |
| Learning outcomes | Course outcome | Subject outcome | | | Method of verification | | |
| | [K6_W01] has a basic knowledge from some branches of mathematics and physics useful for formulating and solving simple problems in the field of environmental technologies and modern analytical methods | Student can use known methods and mathematical models to describe and explain physical phenomena and chemical processes. | | | [SW3] Assessment of knowledge contained in written work and projects | | |
| | [K6_W06] has a basic knowledge of chemical engineering, mechanical engineering and chemical equipment, knows and understands basic processes taking place in green, proenvironmental technologies | Student gains the ability to apply technical drawing and graphical presentation of machines elements and mechanical systems. | | | [SW1] Assessment of factual knowledge | | |
| | [K6_K04] is ready to think and act in a creative and enterprising way, to negotiate, work in a team, assuming different roles | The student is able to creatively use the acquired knowledge in the field of mechanical engineering. | | | [SK5] Assessment of ability to solve problems that arise in practice | | |
| | [K6_U03] is able to use information and communication technologies relevant to the common tasks of engineering, is able to use known methods and mathematical-physical models to describe and explain phenomena and chemical processes | The student can use known methods of mathematical models describing strength of materials. | | | [SU4] Assessment of ability to use methods and tools | | |

| Subject contents | <p>Program Content: Over the course of lectures, student familiarizes himself with methods of spatial element recreation in a the drawing plane, theory of engineering design recording and methods of computer-aided systems designing. The scope of program includes, in particular:</p> <ul style="list-style-type: none"> - Introduction to the subject (formats, lines, scales, technical writing), - Methods of imaging three-dimensional objects on a drawing plane (object projections, finding the missing projection and isometric projections, cross-sections, revolved sections with dimensioning guidelines), - Working and assembly drawings preparation, - Separable connection drawings (threaded connections, pipe threaded connections, bolts, fittings and elbows, thread protections against dismantling), - Inseparable connection drawings (welded, soldered and riveted connections), - Drawings of selected elements from heating and plumbing installation and armature (with emphasis on tanks, piping, valves, sight glasses, liquid level gauges and measuring points). Different examples from chemical industry. - Full installations projects (drawings). <p>Drawing fittings elements of chemical, food and pharmaceutical installations with special attention to tanks, piping, valves, sight glasses, liquid level gauges and measuring connectors. Project calculations. Selection from the catalogues the tank fittings and equipments. Design of the tank or other device (calculations, drawings).</p> | | | | | | | | | | | | | | |
