

## SDAŃSK UNIVERSITY 的 OF TECHNOLOGY

## Subject card

Subject name and code	, PG_00057763								
Field of study	Green Technologies								
Date of commencement of studies	October 2023		Academic year of realisation of subject			2023/2024			
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study				
Mode of study	Full-time studies		Mode of de	elivery		at the university			
Year of study	1		Language	Language of instruction			English		
Semester of study			ECTS cred	its		9.0			
Learning profile	general academic profile		Assessmer	Assessment form			exam		
Conducting unit	Mathematics Center	for Education							
Name and surname	Subject supervisor	upervisor		dr Hanna Guze					
of lecturer (lecturers)	Teachers								
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
of instruction	Number of study hours	45.0	60.0	0.0	0.0		0.0	105	
	E-learning hours inclu			i				_	
Learning activity and number of study hours	Learning activity	Participation i classes incluc plan				Self-st	tudy	SUM	
	Number of study hours	105	10.0			125.0		240	
Subject objectives	Students obtain competence in using methods of mathematical analysis (single variable calculus) and knowledge how to solve simple problems that are found in the field of engineering, in particular connected to green technologies and environment protection.         Course outcome       Subject outcome       Method of verification								
	[K6_K01] understands the need for learning throughout life, can inspire and organize the learning process of others. Is aware of his/ her own limitations and knows when to ask the experts, can properly identify priorities for implementation, critically evaluate his knowledge		Student recognizes the importance of self-expanding knowledge and takes the challenge of working with a group to solve a problem. Student is able to process the acquired information, analyze and interpret it, is able to draw conclusions and reason opinions.			[SK2] Assessment of progress of work [SK1] Assessment of group work skills [SK5] Assessment of ability to solve problems that arise in practice			
	[K6_U03] is able to use information and communication technologies relevant to the common tasks of engineering, is able to use known methods and mathematical-physical models to describe and explain phenomena and chemical processes		Student combines knowledge of mathematics with knowledge from other fields. Student uses methods of mathematical description of phenomena in the physical and chemical processes.			[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information			
	[K6_W01] has a basic knowledge from some branches of mathematics and physics useful for formulating and solving simple problems in the field of environmental technologies and modern analytical methods		Student explains the concept of limit and continuity of functions and gives a graphic interpretation of discontinuity points. Student uses the first and second derivative of a function to analyze its properties. Student uses definite integral to solve geometrical problems. Student uses the basic operations on complex numbers. Student recognizes the importance of skillful use of basic mathematical apparatus in terms of study in the future.		[SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge				

Subject Contents         Pre-exact on nonindes and activature reasonance increases           Functions of one variable: definitions, graphs, properties, continuity, limits, absolute value, equations and inequalities involving these functions, graphications, equations and inequalities involving these functions, applications to mathematical modeling.           Sequences of numbers: antithmetic and geometric, explicit and recurrence form, boundness and monotonicity, limits disequences.           Single variable: calculus: definition of the derivative and differential. Rolle's and Lagrange's theorems and their applications. L'hospital's Rule, monotonicity, limits disequences.           Single variable: calculus: definition of the derivative and differential. Rolle's and Lagrange's theorems and their derivative: concrivity, infection prime.           applications of single variable differential calculus to curve sketching, related rates and approximation problems.           applications of single variable differential calculus to curve sketching, related rates and approximation problems.           applications of single variable differential calculus to curve sketching, related rates and approximation problems.           Definite and indefinite integral: Fundamental Theorem of Calculus, basic integration formulas (integration by substitution, by parts, by partial fractions), improper integrats, geometrical applications, cross of complex numbers, solving equators.           Prerequisites         Complex Numbers: algebraic and trigonometric form, complex conjugate, modulus, arithmetic operations, roots of complex numbers, solving equators.           Recommended reading         Subject passing criteria	Subject contents	The sets of numbers and set notation	n Basic mathematics symbols					
Inequalities with absolute value, polynomials, rational functions, power functions, equations and logarithmic functions, equations and mequalities involving these functions, applications to mathematical modeling.           Sequences of numbers: antimetic and geometric, explicit and recurrence form, boundness and monotonicity, limits of sequences.         Single variable catcutus: definition of the derivative and differential, Rolle's and Lagrange's theorems and their applications of single variable. Check the motion of the derivative and collegiobal external (optimization problems), higher order derivatives, conceavity, inflection points.           applications of single variable afflerential catcutus to curve sketching, related rates and approximation problems.         Definite and indefinite integral: Fundamental Theorem of Calcutus, basic integration formulas (integration by substitution, by parts, by partial fractions), improper integrals, geometrical applications of definite integral and applications of single variable and ingenometric form, complex conjugate, modulus, arithmetic operations, notes of complex numbers: algebraic and trigonometric form, complex conjugate, modulus, arithmetic operations, notes of complex numbers: assolving equations.           Prerequisites         Assessment methods         Ensuing criteria         Passing threshold         Percentage of the final grade freate and activity during classes 50.0%           Recommended reading         Basic literature         Sherman K. Stein, Calcutus and analytic geometry, McGraw-Hill Book Company, 4th edition, 1987.           Supplementary literature         Matematyka - Podstawy z elementami matematyki wyzszej, pod redskig B. Wikiel, Wydawnickw PG, Gdańsk 2009,         K. T. Jankowscy, Zbior Zadań z mate	Subject contents         The sets of numbers and set notation. Basic mathematics symbols.							
monotobicity, limits of sequences.           Single variable calculus: definition of the derivative and differential. Rolle's and Lagrange's theorems and their applications. L'Hospital's Rule, monotonicity and local/global extrema (optimization problems), higher order derivatives, concavity, indication points, applications of single variable differential calculus to curve sketching, related rates and approximation problems.           Definite and indefinite integral: Fundamental Theorem of Calculus, basic integration formulas (integration by substitution, by parts, by partial fractions), improper integrals, geometrical applications of definite integral and applications to other fields           Complex Numbers: algebraic and trigonometric form, complex conjugate, modulus, arithmetic operations, roots of complex numbers, solving equations. Example issues/ example questions/ tasks being completed	1. Find the domian and the range of the function $f(x) =$ . Calculate the inverse of the function.
<b>3</b> 1	2. Find the derivative of $f(x)$ = . Find the intervals on which the function is convex and decreasing.
	3. Sketch the graph of the function f(x)= . Identify any local extrema and points of inflection.
	4. Find the limit of the sequence/function.
	5. Find the indefinite integral of the function f(x).
	6. Find the volume of a solid of revolution obtained by rotating the graph of the function f(x)= about the OX- axis.
	7. Find the roots of the given complex number.
Work placement	Not applicable
