	[K6_U03] is able to use information and communication technologies relevant to the common tasks of engineering, is able to use known methods and mathematical-physical models to describe and explain phenomena and chemical processes		Student can analyse basic problems in the field and construct solving algorithms. Student is oriented in basic measuring techniques in physical chemistry and is familiar with relevant instrumentation. Student understands physico-chemical formulae and expressed verbally their meaning. Student is capable of expressing assorted relations verbally with precision allowing for writing a suitable equation.			[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools	
	[K6_W02] has a basic knowledge of chemistry including general chemistry, inorganic, organic, physical, analytical, including the knowledge necessary to describe and understand the phenomena and chemical processes occurring in the environment; measurement and the determination of the parameters of these processes.		Student knows ecological and social consequences of practical implementations of the phenomena under study. Student efficiently uses basic concepts involved in the subject, is conscious of their mutual relations and is capable to explain these relations.			[SW1] Assessment of factual knowledge
