

## Subject card

Subject name and code	Technology of Food Preservation, PG_00058671						
Field of study	Biotechnology						
Date of commencement of studies	February 2024		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		6.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Chemistry, Technology and Biochemistry of Food -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Edyta Malinowska-Pańczyk				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	45.0	0.0	15.0	90
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	90		15.0		45.0	150
Subject objectives	The aim of the lecture is familiarizing of students with methods of food preservation.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_K02] is aware of the limitations and the necessity of continuous development of knowledge and technology; understands the need for education and constant training	The student develops and presents issues that represent advances in food preservation knowledge.	[SK5] Assessment of ability to solve problems that arise in practice
	[K7_W10] has knowledge in the field of bioprocess technology and engineering and knowledge in the field of engineering design of technical objects and processes including engineering graphics with the use of computer-aided design and databases	The student is able to design the preservation process of a selected food product.	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation
	[K7_U05] is able to apply instrumental methods of quantitative and qualitative analysis and studies on activity of biomolecules, select and apply diagnostic and analytical methods in the field of his/her specialty with particular emphasis on genetic, molecular and microbiological diagnostics and diagnostics based on antigen-antibody reaction	The student estimates the changes in the properties of products caused by preservation. Measures the parameters affecting the effectiveness of preservation of certain products.	[SU4] Assessment of ability to use methods and tools
	[K7_U10] is able to use knowledge about possibilities, aims and limitations of biotechnology to develop, design and obtain products and biotechnological processes in the area of his/her specialization	The student describes the methods of food preservation. Selects the preservation method appropriate for a specific product. Analyzes factors affecting microbiological safety of food	[SU3] Assessment of ability to use knowledge gained from the subject
	[K7_W07] knows issues related to plant and animal raw materials, their quality, impact on human health, processing technology and chemical and biological hazards resulting from process treatment and storage	The student has knowledge of the quality of food raw materials and its impact on technological processes, especially food preservation processes.	[SW1] Assessment of factual knowledge
Subject contents	LECTURE. Factors affecting shelf-life of chilled foods. Refrigeration in the meat, fish, dairy and vegetable-fruit industry. Chilling equipment and refrigerated transport. Preservation at sub-zero temperatures. Changes of food properties during freezing, Methods of food freezing. Sterilization and pasteurization. Heat resistance of microorganisms. Biochemical changes in canned foods. Equipment and methods of sterilization and pasteurization: retort procedures and aseptic canning. High temperature-short time processes. Hermetic packaging of canned food: Containers production, used materials and protective coatings. Microbiological safety and quality control of canned food Effect of high pressure on microorganisms and enzymes. Various methods of smoking, generation and composition of wood smoke. The factors influencing adsorption and diffusion of smoke components. Interactions of smoke with different food components. Antimicrobial and antioxidant activity of smoke constituents. Development of sensory properties of smoked goods. Health hazard associated with smoking. Smokehouses and smoke generators, liquid smoke applications. Shelf-life and quality control of smoked food. Effect of pH on the growth and survival of foodborne microorganisms. The use of lactic-acid fermentation or organic acids addition to preserve dairy, meat, fish and vegetable products. The antibacterial efficacy of organic acids. Influence of water activity on microbial growth, death and survival. Preservation of food products by salting, curing and dehydration. Freeze-dried products. Chemical preservation. The use of natural antimicrobials from animal and plant sources. Suitability of bacteriocins and antimicrobial enzymes for food preservation. LABORATORY. Influence of pasteurization on milk shelf-life. Visitation of cold storage plant. Influence of salting and curing on properties of meat products. Drying and lyophilization of food. Production of smoked fish. SEMINAR. Presentation of a new achievements in area of food preservation.		
Prerequisites and co-requisites	Basic knowledge in area of microbiology and food processing		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Seminar - presentation of chosen topic	60.0%	20.0%
	Laboratory - laboratory practise	60.0%	30.0%
	Lecture- written exam	60.0%	50.0%
