

## Subject card

Subject name and code	Mycology and Parasitology Molecular, PG_00058257						
Field of study	Biotechnology						
Date of commencement of studies	February 2024		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Katedra Biotechnologii i Mikrobiologii -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Anna Brillowska-Dąbrowska				
	Teachers		dr hab. inż. Lucyna Holec-Gąsior  dr inż. Martyna Mroczyńska-Szeląg  dr hab. inż. Anna Brillowska-Dąbrowska				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	45.0	0.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	75		10.0		40.0	125
Subject objectives	Knowledge and understanding of the processes relating to replication and expression of the genetic material of microscopic fungi and parasites. Knowledge of a variety of molecular biology techniques and the ability to use them in the disciplines of mycology and parasitology. Gaining the skill to both independent work and in group in molecular biology lab using the tools of research and analysis and develop the results.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_K02] is aware of the limitations and the necessity of continuous development of knowledge and technology; understands the need for education and constant training		The student can find up-to-date information on the current state of knowledge and technology in the fields of mycology and parasitology and use it to update their knowledge.		[SK5] Assessment of ability to solve problems that arise in practice		
	[K7_U05] is able to apply instrumental methods of quantitative and qualitative analysis and studies on activity of biomolecules, select and apply diagnostic and analytical methods in the field of his/her specialty with particular emphasis on genetic, molecular and microbiological diagnostics and diagnostics based on antigen-antibody reaction		The student is capable of rationally selecting methods appropriate for conducting research tasks. They can optimize diagnostic procedure protocols.		[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information		
	[K7_W01] has advanced knowledge of methods of genetic engineering and molecular genetics, functioning of the immune system and mechanisms of immune system response, diagnostic methods, and analytical methods in the area of specialty		The student knows how to solve advanced problems and research tasks in their field of specialization, using tools applied in genetic engineering and molecular genetics.		[SW1] Assessment of factual knowledge		

## Subject contents

1. Mycology - introduction.
2. Taxonomy of fungi - the impact of the development of molecular biology to the reclassification of fungi.
3. The use of molecular biology methods in mycology.
4. Molecular diagnosis of fungal infections.
5. Molecular basis of fungal resistance to antimycotics (azoles and echinocandins).
6. The study of gene expression levels.
7. Parasitism and other interspecies relationships.
8. Parasites in the system of the animal world.
9. Environmental determinants of parasitic diseases.
10. Factors immune system parasite-host.
11. Biochemical aspects of the interaction of two organisms of particular importance in medicine
- 12 The most common parasitic infections.
- 13 Biology and pathogenicity of selected species of parasitic protozoa.
14. Laboratory diagnosis of selected parasitosis: molecular methods for detection of parasites, microscopic examination and serological diagnostics.
15. Basic issues of medical parasitology.

### Laboratories

#### A.

1. Identification of molds and yeasts - 5 hours.
- 2 Molecular identification of molds and yeasts - 5 hours.
3. The study of gene expression levels of some species of fungi responsible for the resistance to azoles - 15 hours.

#### B.

1. Microscopy of ready-made preparations of various species of parasites.
2. DNA isolation from canine blood and molecular detection of *Babesia canis* DNA using PCR and real-time PCR.
3. DNA isolation from mouse tissues (liver, heart, brain, kidney, spleen) and molecular detection of *Toxoplasma gondii* tissue cysts in intermediate host tissues using two molecular targets.

	4. Counting tissue cysts in a homogenized brain specimen of mice experimentally infected with Toxoplasma gondii		
Prerequisites and co-requisites	Basic knowledge on molecular biology		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Testing - Mycology Laboratories	60.0%	13.0%
	Report - Mycology Laboratories	60.0%	12.0%
	Assessment Tests - Parasitology Laboratories	60.0%	13.0%
	Report - Parasitology Laboratories	60.0%	12.0%
	Written Exam for the Parasitology Lecture	60.0%	25.0%
	Written Exam for the Mycology Lecture	60.0%	25.0%
