| Subject objectives                             | The aim of the course is to provide students with basic knowledge in the field of electrical devices and installations.  |  |   |                                     |                |   |     |     |
| Learning outcomes                              | Course outcome   |  | Subject outcome   |                                     |                | Method of verification                                |     |     |
|  | [K6_U01] has the ability to self-<br>education, can obtain information<br>from literature, databases and<br>other sources, uses information<br>technology, Internet resources;<br>can integrate the obtained<br>information, make their<br>interpretation, as well as draw<br>conclusions and formulate and<br>justify opinions  |  | The student classifies and<br>distinguishes DC and AC<br>machines. The student defines the<br>means of basic and additional<br>protection against electric shock. |                                     |                | [SU2] Assessment of ability to<br>analyse information |     |     |
|  | [K6_W11] has elementary<br>knowledge of electrical devices<br>and installations as well as basics<br>of control and automation   |  | The student defines and classifies<br>the basic concepts of electrical<br>engineering. The student solves<br>simple DC and AC circuits.                           |                                     |                | [SW1] Assessment of factual knowledge                 |     |     |
| Subject contents                               | Lectures: Basic concepts of theoretical electrical engineering. Direct and alternating current. Ohm's law.<br>Conductor resistance. Kirchhoff's laws. Calculation of resultant resistance. Capacitors. Sinusoidal current.<br>Power and energy in DC and AC circuits. Three-phase systems. Machines and electric drive. Types of<br>electric machines. Transformers. No-load condition, loads and short circuits of the transformer. Types of<br>electric machines. Direct current generators: separately excited, shunt and series-shunt. DC motors:<br>separately excited and series. Alternating current synchronous generators. AC asynchronous motors.<br>Nominal sizes of electrical machines. Regulation and stabilization of motor speed. Electrical Installations.<br>Means of basic protection against electric shock. Additional shock protection. Reset. Earthings and<br>earthings. RCDs. |  |   |                                     |                |   |     |     |
| Prerequisites<br>and co-requisites             | Knowledge of operations with complex numbers. Basic knowledge of physics.  |  |   |                                     |                |   |     |     |

| Assessment methods   | Subject passing criteria   | Passing threshold  | Percentage of the final grade |  |  |
|--|--|--|-------------------------------|--|--|
| and criteria   | Lecture - written tests.   | 60.0%  | 50.0%                         |  |  |
|  | Exercises - written tests.   | 60.0%  | 50.0%                         |  |  |

| Example issues/<br>example questions/<br>tasks being completed | 1. What is conductance?2. What is impedance?3. Introduce Ohm's law.4. Discuss the characteristics of a separately excited DC motor.5. Describe the construction of a ring motor.6. How does a residual current device work?7. Present the layout of the TT network.8. What is the additional protection against electric shock in LV networks? |  |                               |  |  |
