

Subject card

Subject name and code	Technical mechanic [E], PG_00044531						
Field of study	Transport						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Katedra Wytrzymałości Materiałów -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Agnieszka Sabik					
	Teachers	dr inż. Marek Jasina dr hab. inż. Agnieszka Sabik					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	45.0	0.0	0.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	75	5.0		45.0		125
Subject objectives	Solving technical problems on the basis of mechanical rules. Statical and strength analysis of construction elements.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U10] able to carry out simple engineering tasks related to the construction and operation of a selected element of the transport system, select the right methods and tools, select the right technical parameters for an object to be designed including economic and environmental aspects	Student is able to determine the adequate statical system of a real structure. Student is able to check the load capacity of the structure.			[SU1] Assessment of task fulfilment		
	[K6_W02] has basic knowledge of physics which includes technical mechanics, fluid mechanics, solid state physics, optics and acoustics required for understanding basic phenomena of physics which occur in transport	Student is able to calculate the stress distribution in a given crosssection of a structure. Student determines the crosssection or material of frame elements.			[SW1] Assessment of factual knowledge		
Subject contents	Classical mechanics. Statics of flat frame structures. Reactions and internal forces in beams, frames, trusses. Stress and strain state. Constitutive laws, Hooke's law. Tension/compression, bending, twisting, shear. Bending line of a beam. Stability of columns. Strength criteria.						
Prerequisites and co-requisites							
Assessment methods and criteria	Subject passing criteria	Passing threshold			Percentage of the final grade		
	Tests	60.0%			40.0%		
	Exam	60.0%			60.0%
