

## Subject card

Subject name and code	Operations research and numerical methods, PG_00044577						
Field of study	Transport						
Date of commencement of studies	October 2023		Academic year of realisation of subject			2024/2025	
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies		Mode of delivery			at the university	
Year of study	2		Language of instruction			Polish	
Semester of study	3		ECTS credits			4.0	
Learning profile	general academic profile		Assessment form			exam	
Conducting unit	Department of Railway Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor						
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	15.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		35.0	100
Subject objectives	The aim of the course is to familiarize students with the basic issues related to the subject of operations research and numerical methods						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_W01] has basic knowledge of mathematical analysis, algebra, calculus of probability and operational research required for describing and solving transport problems		The student has basic knowledge of operations research and numerical methods necessary to solve problems in transport			[SW1] Assessment of factual knowledge	
	[K6_U06] able to plan and conduct simple laboratory and operational experiments and simulations in the area of transport; able to interpret the results and formulate conclusions		The student is able to independently solve the tasks related to the optimization of transport problems. Is able to solve problems using the known numerical methods.			[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools	
Subject contents	Introduction to operating researches. Building of decision model. Linear programming. Graphic method and simpleks. Dual task. Degeneracy of solutions. Forwarding question. Discreet optimization. Method of division and limitations. Basic notions and definitions of theory of vice - count. Network programming. Method CPM and PERT. The analysis in respect of time - cost. Interpolation and aproksymacja. Integration. Solving non - linear equations. Solving differential equations and arrangements of such equations.						
Prerequisites and co-requisites	Mathematics						
Assessment methods and criteria	Subject passing criteria		Passing threshold			Percentage of the final grade	
	Lecture - exam		50.0%			30.0%	
	Exercise		50.0%			25.0%	
	Laboratory		50.0%			20.0%	
	Exercise		50.0%			10.0%	
	Laboratory		50.0%			5.0%	
	Lecture - exam		50.0%			10.0%
