

关。GDAŃSK UNIVERSITY 创 OF TECHNOLOGY

Subject card

| Subject name and code | Mathematics, PG_00048601 | | | | | | | | |
|--|--|--|--|-------------------------------------|--|--|-----------|-----|--|
| Field of study | Chemistry in Construction Engineering | | | | | | | | |
| Date of commencement of studies | October 2023 | | Academic year of realisation of subject | | | 2023/ | 2023/2024 | | |
| Education level | first-cycle studies | | Subject group | | | Obligatory subject group in the field of study | | | |
| Mode of study | Full-time studies | | Mode of delivery | | | at the university | | | |
| Year of study | 1 | | Language of instruction | | | Polish | | | |
| Semester of study | 1 | | ECTS cred | ECTS credits | | | 9.0 | | |
| Learning profile | general academic profile | | Assessment form | | | exam | | | |
| Conducting unit | Mathematics Center - | -> Vice-Rector | for Education | | | | | | |
| Name and surname | Subject supervisor | dr Anita Dąbrowicz-Tlałka | | | | | | | |
| of lecturer (lecturers) | Teachers | | | | | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Projec | :t | Seminar | SUM | |
| | Number of study hours | 30.0 | 30.0 | 0.0 | 0.0 | | 0.0 | 60 | |
| | E-learning hours inclu | uded: 0.0 | | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | | Participation in consultation hours | | Self-study S | | SUM | |
| | Number of study hours | 60 | | 20.0 | | 145.0 | | 225 | |
| Subject objectives | Students obtain competence in the range of using methods of mathematical analysis and linear algebra and knowledge how to solve simple problems that can be found in the field of engineering. | | | | | | | | |
| Learning outcomes | Course outcome | | Subject outcome | | | Method of verification | | | |
| | [K6_W01] has a basic knowledge from some branches of mathematics and physics useful for formulating and solving simple problems in the field of environmental technologies and modern analytical methods | | Student mentions basic properties of elementary functions. Student solves equations and inequalities with elementary functions. Student gives the definition of basic notions of differential calculus. Student uses basic notions and formulas of differential calculus. Student determines intervals of monotonicity of a given functions and its extrema. Students calculates antiderivatives using the substitution method of integration and integration by parts. Student applies definite integrals to solving geometrical problems. Student performs calculations on complex numbers. | | | [SW1] Assessment of factual knowledge | | | |
| K6_U02 | | | appropriate data to solve the task and is able to correctly | | [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools | | | | |

| Subject contents | Functions of one variable and their properties: The absolute value function definition, solving equations and inequalities with absolute value, graphs of functions with absolute value. Power functions solving power and polynomial equations and inequalities. Rational functions solving rational equations and inequalities. Exponential function properties and graphs, solving exponential equations and inequalities. Logarithmic functions properties and graphs, solving logarithmic equations and inequalities. Trigonometric and cyclometric functions properties and graphs, solving trigonometric equations and inequalities. Limits and continuity: Infinite sequences. Fundamental definitions of limit of sequence, convergence and divergence, limit theorems. Applications to solving equations . Differential calculus of functions with one variable and applications of differential calculus of functions with one variable: Definition of first derivative and differential. Rolls and Lagranges theorems. Higher derivatives and differentials. Monotonicity and local extrema. Convexity, concavity and inflexion points of a function. De Hospitals Thorem. Asymptotes. Applying differential calculus to studying the properties of functions with one variable. The process of finding antiderivatives and integration formulas the substitution method of integration and integration by parts. Integration of rational, trigonometric and irrational functions. Definite integrals. Applications of integral calculus in computing areas of plane figures, lengths of arcs, volumes of solids of revolution. Complex numbers. | | | | | | |
|---------------------|--|--|-------------------------------|--|--|--|--|
| and co-requisites | | | | | | | |
| Assessment methods | Subject passing criteria | Passing threshold | Percentage of the final grade | | | | |
| and criteria | Written exam | 50.0% | 50.0% | | | | |
| | Tests (lecture) | 0.0% | 6.0% | | | | |
| | Activity during classes | 0.0% | 8.0% | | | | |
| | Midterm exams | 0.0% | 36.0% | | | | |
| Recommended reading | Basic literature | Praca zbiorowa pod redakcją Wikeł B.: Matematyka - Podstawy z elementami matematyki wyższej. PG, Gdańsk 2007; M. Gewert, Z. Skoczylas : Analiza matematyczna 1, Oficyna Wydawnicza GiS 2008; K. Jankowska, T. Jankowski : Zbiór zadań z matematyki, Wydawnictwo PG, 2010; | | | | | |

| Example issues/ example questions/ tasks being completed | 1. Find the domain and the set of values of the function f(x)= Determine the inverse function of f. |
|--|---|
| 5 | 2. Check the continuity of the following function $f(x)=$. |
| | 3. Find local extremes and intervals of monotonicity of the following function $f(x)=$. |
| | 4. Evaluate the indefinite integral of the given rational function . |
| | 5. Give three applications of the definite integral with appropriate rules. |
| | 6. Compute the improper integral or prove its divergence |
| | 7. Solve the equation in a set of complex numbers |
| Work placement | Not applicable |
