

Subject card

Subject name and code	Modern Analytical Techniques, PG_00048919								
Field of study	Chemistry in Construction Engineering								
Date of commencement of studies	October 2023		Academic year of realisation of subject			2024/2025			
Education level	first-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	2		Language of instruction			Polish			
Semester of study	4		ECTS credits			4.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Department of Analytical Chemistry -> Faculty of Chemistry								
Name and surname	Subject supervisor		dr hab. inż. Justyna Płotka-Wasylka						
of lecturer (lecturers)	Teachers								
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	:t	Seminar	SUM	
of instruction	Number of study hours	15.0	0.0	30.0	0.0		15.0	60	
	E-learning hours included: 0.0								
	Address on the e-learning platform: https://enauczanie.pg.edu.pl/moodle/course/view.php?id=3783								
Learning activity and number of study hours	Learning activity Participation in classes including plan				Self-study SUM		SUM		
	Number of study hours	60		5.0		35.0		100	
Subject objectives	Acquaintance with modern analytical techniques in theory and practice that will enable analysis building materials, monitoring and analytics of environmental pollution originating from squares construction, emitted from building materials								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	K6_W08		The student is able to analyze phenomena and provide methods for them analysis and monitoring, so much needed in terms of construction			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects			
	K6_W03		After completing the course, the student will have knowledge of issues related to analytical techniques, which can be used for analysis and pollution monitoring building materials and construction sites.			[SW1] Assessment of factual knowledge			
	K6_U06		After completing the course, the student will have knowledge of issues related to analytical techniques, which can be used for analysis and pollution monitoring building materials and construction sites.			[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task			

Data wygenerowania: 21.11.2024 22:28 Strona 1 z 3

2. Theoretical and practical basics in the use of chromatographic techniques. Analysis of building materials and processing of received data. 3. Chemical sensors, an electronic nose type used to analyze and monitor release pollution from building materials. 4. Micro-extraction techniques used to prepare samples for analysis. Building materials and their solid, liquand gas impurities. Basic knowledge of chemistry. Knowledge of the dangers arising from emissions of building materials. Assessment methods and criteria Subject passing criteria	Subject contents	bject contents 1. Spectroscopic techniques used to analyze building materials
