

Subject card

Subject name and code	, PG_00061718								
Field of study	Environmental Engineering								
Date of commencement of studies	October 2023		Academic year of realisation of subject			2023/2024			
Education level	second-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study			
Mode of study	Part-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish			
Semester of study	1		ECTS credits			3.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Department of Geote	chnical and Hy	draulic Engine	ering -> Faculty	of Civi	l and Er	and Environmental Engineering		
Name and surname	Subject supervisor dr hab. inż. Piotr Zima								
of lecturer (lecturers)	Teachers								
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	ect Seminar		SUM	
of instruction	Number of study hours	15.0	0.0	10.0	0.0	0.0		25	
	E-learning hours inclu	ıded: 0.0							
Learning activity and number of study hours	Learning activity	Participation i classes include plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	25		3.0		52.0		80	
Subject objectives	Mastering the basics of mathematical modeling and basic numerical techniques used in sanitary engineering. Practical aspects of modeling in sanitary engineering.								
Learning outcomes	Course out	Subject outcome			Method of verification				
			The student formulates the problem of solving differential equations with ordinary and partial derivatives describing selected problems in the field of sanitary engineering. It describes the solution of an engineering problem using a structural algorithm. Uses basic numerical methods to solve problems. He knows how to take into account practical aspects at this stage of modeling.			[SW1] Assessment of factual knowledge			
	[K7_W12] has knowledge of contemporary and useful principles on data acquisition, filtration, processing and analysis		The student is able to obtain information on the development of numerical methods used in sanitary engineering and is able to apply them in practice.			[SW1] Assessment of factual knowledge			
	K7_U06		Student is able to formulate a problem in the field of mathematical description of the phenomenon and select the appropriate numerical or analytical methods to solve it on a practical level			[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools			
	[K7_U05] can rely on scientific sources for modern methods and technologies, and propose trends in the development of methods and rules for acquiring, filtering, processing and analyzing data		The student is able to obtain information on the development of numerical methods used in sanitary engineering. He knows the practical aspect of their use.			[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools

Solving systems of algebraic linear equations. Methods for solving nonlinear equations and systems of nonlinear equations. Interpolation and approximation. Solving outdray differential equations initial problem and implicit multi-sep methods. Solving systems of ordinary differential equations in the problem and implicit multi-sep methods. Solving systems of ordinary differential equations with partial derivatives. Classification of equations. Formulating a problem solution. Finite difference method, approximation of first and second order derivatives. LABORATORY Solving ordinary differential equations describing selected issues in the field of environmental engineering. Practical aspect of modelling - simulation of rainwater outflow in the HEC-RAS program Prerequisites Assessment methods and correquisites Subject passing criteria Basic Interature 1.
