

## Subject card

Subject name and code	Steel Structures, PG_00048228						
Field of study	Civil Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			10.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Metal Structures -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Dariusz Kowalski					
	Teachers	dr inż. Dariusz Kowalski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	20.0	0.0	20.0	0.0	70
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	70	12.0		168.0	250	
Subject objectives	<p>The aim of the course is to introduce students to the principles of design, construction and loading conditions of the following types of engineering structures:</p> <ul style="list-style-type: none"><li>• tall objects in the form of: towers, masts, chimneys,</li><li>• shell structures: tanks, silos, bunkers, bunkers, pipelines,</li><li>• composite structures: ceilings, columns, beams,</li><li>• thin-walled structures: purlins, transoms,</li><li>• tall and high-rise buildings.</li></ul> <p>The issues related to:</p> <ul style="list-style-type: none"><li>• designing structures subjected to fatigue loads,</li><li>• advanced rules for selecting the steel grade for structures,</li><li>• anti-corrosion and fire protection of metal structures,</li><li>• NDT</li></ul>						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W04] has knowledge on advanced strength of materials, modeling and optimisation of materials and constructions; has knowledge of fundamentals of Finite Element Method and general nonlinear analysis of engineering constructions and systems	1. The student has in-depth knowledge of various types of steel structures. 2. The student is able to characterize the types of main loads in particular types of engineering structures. 3. The student has knowledge of the extensive issues of steel material strength and its changes over time under the influence of variable loads 4. Has knowledge of structure modeling using programs based on the FEM method	
	[K7_U01] can evaluate and list any loads acting on constructions	Can collect loads acting on any type of metal structure objects	
	[K7_U02] can design and dimension complex steel, concrete (including reinforced), wood and masonry constructions and its details	1. The student knows how to design complex steel structures according to the rules of code. 2. The student knows how to dimension the elements of complex steel structures according to the rules of code	
	[K7_W14] knows and applies building codes and obeys the Construction Law; has knowledge on environmental impact of investment realisation	1. The student is familiar with the subject standards and knows how to use them when designing various types of steel structures 2. The student knows the rules of selecting steel material for individual types of structures, taking into account the requirements beyond strength	
[K7_W02] knows principles of analysis, design and dimensioning of complex constructions and its elements	He knows the rules of analyzing various metal structures		
Subject contents	<p>Program content in the field of lectures:</p> <ul style="list-style-type: none"> <li>• Steel selection for special constructions</li> <li>• Dimensioning of the structure due to the fatigue phenomenon</li> <li>• Renovation, modernization and strengthening of steel structures</li> <li>• Composite structures</li> <li>• Tower structures - towers, masts, chimneys,</li> <li>• Tall buildings</li> <li>• Shell structures - tanks, silos, bunkers, pipelines</li> <li>• Corrosion protection of metal structures</li> <li>• NDT testing of structures</li> </ul> <p>Program content of exercises and design:</p> <ul style="list-style-type: none"> <li>• Design of the floor and composite beam.</li> <li>• Design exercise in the field of corrosion protection of structures.</li> <li>• Design of a thin-walled bi-directional element.</li> <li>• Design exercise on steel structure strengthening</li> </ul>		
Prerequisites and co-requisites	The student has knowledge of the entire first-cycle study program in the field of Civil Engineering		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	60.0%	50.0%
	Colloquium, Test	60.0%	30.0%
	Exercises, Project	60.0%	20.0%
