

Subject card

Subject name and code	Hydraulics and hydrology, PG_00041517						
Field of study	Civil Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			English		
Semester of study	1	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Hydraulic Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor						
	Teachers		dr inż. Andam Mustafa dr hab. inż. Tomasz Kolerski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	45	5.0		0.0		50
Subject objectives	Students should master the following capacities: - analysis of hydrological processes in catchment, - determination of open-channel hydraulic parameters, oriented towards problems of hydroengineering,						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_W11] has deep knowledge of marine and inland hydrotechnical constructions; has knowledge about hydraulic and hydrological constrains in design and exploitation of buildings	Student knows how to calculate hydraulics of hydroengineering structures, Knows procedures to calculate effective rainfall, knows how to calculate flood storage of the retention reservoirs			[SW1] Assessment of factual knowledge		
	[K7_U10] can analyse complicated environmental loads acting on a construction; can apply proper processes to design marine and hydroengineering constructions taking into consideration hydrological and hydraulic impact	Student knows how to calculate surface runoff base on the UH theory, Knows how to determine parameters of hydraulic structures base on hydraulic calculations			[SU1] Assessment of task fulfilment		
Subject contents	LECTURE Hydrological cycle. Hydrological properties of catchment area. Parameters of the river catchment. The water balance of the river catchment. Run-off. Surface run-off. Unit hydrogram. Flow in rivers. Storm flood and characteristic flows in rivers. Open channel steady and unsteady flow. Hydrologic statistics. Ice phenomena on rivers. CLASSES and LAB Hydraulic and hydrological computations and some laboratory exercises on hydrological processes.						
Prerequisites and co-requisites	No requirements						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Final test	60.0%	30.0%
	Midterm colloquium	60.0%	40.0%
	Lab reports	60.0%	30.0%
