

Subject card

Subject name and code	Photogrammetry , PG_00061763							
Field of study	Geodesy and Cartography							
Date of commencement of studies	October 2023		Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study		
						Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	2		Language of instruction			Polish		
Semester of study	3		ECTS credits			4.0		
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Department of Geodesy -> Faculty of Civil and Environmental Engineering							
Name and surname	Subject supervisor	dr inż. Katarzyna Bobkowska						
of lecturer (lecturers)	Teachers							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	15.0		0.0	60
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	60		9.0		31.0		100
Subject objectives	 Introduction to the definition of photogrammetry, its applications, methods, and products. Introduction to the technology of orthophotomap development and its use. Development of digital 3D models using photogrammetric techniques and methods. Use of photogrammetry products for the analysis of engineering structures. 							

IKG_WOT] has a well-astablished knowledge and understands concepts in the field of engineering geodesy including the interactive ments methods corried out with the use of geodetic instruments methods carried out with the use of geodetic instruments and photogrammetric methods generally and remote sensing technologies related to geodetic support for inventory measurements and photogrammetry with remote sensing. IKG_UT2 can perform topographic-based on photogrammetric metalymetric maps of ports, wharf and coastal areas, and can impret enamine fairs and maps of coastal regions. IKG_UT2 can perform topographic-based on photogrammetric measurements and photogrammetry with remote sensing. IKG_UT2 can papely the receiver. If the student is able to determine the x, y, z coordinates of points based on photogrammetric measurements. IKG_UT3 can papely the receiver. If the student is able to determine the x, y, z coordinates of points and coastal areas, and can impret enamine determined the x, y, z coordinates of points and coastal areas. And can impret enamine the can be compared to the compared to	Learning outcomes	Course outcome	Subject outcome	Method of verification				
Bathymetric maps of ports, wharf and coastal areas, and can be alreajons IKE, U14] can apply the necessary skills to conduct independent work in the field of topographic surveys along with the elaborating of results, geodetic investment service, surveying and inventory measurement, photogrammetry and remote sensing, and making the maps and elaborations for legal purposes including delimitation and subdivision of real estate IKE_U08] can use modern measurement technologies to solve common tasks in 3D model of an object. SU1] Assessment of task fulfilment Subject contents		knowledge and understands concepts in the field of engineering geodesy including the use of calculations and measurements methods carried out with the use of geodetic instruments and photogrammetric and remote sensing technologies related to geodetic support for investment, surveying and inventory measurements and photogrammetry with remote	photogrammetric technologies and					
Skills to conduct independent work in the field of topographic surveys along with the elaborating of results, geodetic investment service, surveying and inventory measurement, photogrammetry and remote sensing, and making the maps and elaborations for legal purposes including delimitation and subdivision of real estate [K6_U08] can use modern measurement technologies to solve common tasks in 3D modeling		bathymetric maps of ports, wharf and coastal areas, and can interpret marine charts and maps	the x, y, z coordinates of points based on photogrammetric
