GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Automation of Ship Systems, PG_00055801		
Field of study	Automation, Robotics and Control Systems		
Date of commencement of studies	February 2023	Academic year of realisation of subject	2023/2024
Education level	second-cycle studies	Subject group	
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	3.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering		
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Roman Śmierzchalski	
	Teachers		

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	15.0	0.0	0.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	10.0	35.0	75

Subject objectives

The aim of the course is to present control and control systems of ship systems and the technical requirements for these systems. The laboratory will provide students with the ability to design, based on programmable logic controllers and a visualisation system, control and steering systems for selected automated ship systems.

Learning outcomes

Course outcome	Subject outcome	Method of verification
K7_W08	Student develops an extended knowlege of programme development and design of complex marine automation systems using PLC and SCADA,	[SW3] Assessment of knowledge contained in written work and projects
K7_U04	Student has the ability to self-educate on the ship's automated electrical power system, main propulsion control systems, auxiliary equipment of the ship.	[SU2] Assessment of ability to analyse information
K7_U03	Student will be able to prepare and deliver an oral presentation, in Polish and English, on a detailed questionnaire on marine control systems.	[SU5] Assessment of ability to present the results of task
K7_W06	Student is able to design automation devices, control systems and controls in the field of ship systems.	[SW3] Assessment of knowledge contained in written work and projects
K7_W11	Student applies computer-based methods and tools to the analysis, synthesis and design of marine automation systems and systems.	[SW3] Assessment of knowledge contained in written work and projects
K7_U07	Student has the ability to use simulation methods to formulate and solve engineering tasks in marine automation.	[SU4] Assessment of ability to use methods and tools

Subject contents	Ship as a control object, division into systems and subsystems. Scope of automation of the ship's navigation, cargo and power systems. Regulations and requirements of classification societies for ship automation systems. Regulation, command and control in ship systems. Integrated control system on a ship. Automation of the electrical power system. Automated ship power plants. Generator set automation, automatic synchronisation of generators, active and reactive power distribution. Automation system solutions used on ships from companies: Kongsberg, Simens, SAM. Control algorithms for cooperation of shaft generators with combustion engine driven generators. Shaft generator systems with frequency stabilisation, principle of operation, control algorithms. Cooperation of turbogenerators using exhaust gas heat with base generators. Control algorithms. Control of emergency generator set. Methods of starting combustion engines. Engagement of the emergency generator set in case of mains power failure. Ship propulsion system automation. Remote control of internal combustion engines. Block diagram. Control algorithms. DENIS standard. Internal combustion engine remote control system using AutoChief 4 as an example. Emergency control. Speed controllers for internal combustion engines. Systems for remote control of an adjustable propeller. Automation of auxiliary systems. Starting air system automation. Control methods of compressor units. Fuel system automation. Control of fuel transfer pumps. Fuel centrifuge automation systems. Operating principle, control algorithms. Fuel temperature and viscosity automatic control systems. Automatic control systems for main engine air charging system. SG and SP lubrication system automatics. Control of conveying pumps, circulating pumps. Lubricating oil temperature control. Internal combustion engine cooling system automatics. Sea and fresh water circulation pumps control. Temperature control of fresh water. Automation of steam generation system. Control systems for water level, steam pressure, boiler efficiency and flue gas oxygen content. Parallel operation of boilers. Boiler burner control systems. Remote control systems for bilge, cargo and fuel system valves. Automation systems for cargo refrigeration rooms on cargo and fishing vessels. Solutions of refrigeration systems used on ships by ABB, York Marine, Sabroe. Capacity and temperature control. Operation of refrigeration control units. Refrigerated container systems. Power supply and power distribution on vessels carrying refrigerated containers.
Prerequisites and co-requisites	Basic knowledge of automation and control technology.

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
laboratory report	100.0%	50.0%
colloquium	60.0%	50.0%
