

Subject card

Subject name and code	Mathematical Analysis, PG_00061887						
Field of study	Materials Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			7.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Anna Niewulis				
	Teachers		mgr Katarzyna Kiepiela dr Anna Niewulis				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	45.0	0.0	0.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	75	15.0		85.0	175	
Subject objectives	Students obtain competence in the range of using methods of mathematical analysis and linear algebra and knowledge how to solve simple problems that can be found in the field of engineering.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W01] Has knowledge of selected branches of mathematics, useful for formulating and solving problems and describing mechanical and physical phenomena, and chemical processes.		Student uses methods of mathematical description of phenomena in the physical / mechanical / chemical processes.		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U05] can learn independently		Student understands the need of lifelong learning. Student is able to inspire others and organize their learning process.		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_K01] Understands the need to improve professional and personal competencies; is conscious of own limitations and knows when to turn to experts, properly establishes priorities helping to accomplish tasks defined by oneself or others.		Student recognizes the importance of self-expanding knowledge and takes the challenge of working with a group to solve a problem.		[SK5] Assessment of ability to solve problems that arise in practice		

Subject contents	<p>Functions of one variable and their properties: Power functions solving power and polynomial equations and inequalities. Rational functions solving rational equations and inequalities. Exponential function properties and graphs, solving exponential equations and inequalities. Logarithmic functions properties and graphs, solving logarithmic equations and inequalities. Trigonometric and cyclometric functions properties and graphs, solving trigonometric equations and inequalities.</p> <p>Limits and continuity: Infinite sequences. Fundamental definitions of a limit of a sequence, convergence and divergence, limit theorems. Applications to solving equation.</p> <p>Differential calculus of one variable functions and its applications: Definition of a first derivative and differential. Rolls and Lagranges theorems. Higher derivatives and differentials. Monotonicity and local extrema. Convexity, concavity and inflexion points of a function. De l'Hospital's Theorem. Asymptotes. Applying differential calculus to studying the properties of one variable functions. Integral calculus of one variable functions antiderivatives: The process of finding antiderivatives and integration formulas the substitution method of integration and integration by parts.</p> <p>Integration of rational, trigonometric and irrational functions. Definite integrals in Riemann's sense: Newton-Leibniz Theorem. Integration formulas, the substitution method of integration and integration by parts for definite integrals. Applications of integral calculus in computing areas of plane figures, lengths of arcs, volumes of solids of revolution.</p>											
Prerequisites and co-requisites												
Assessment methods and criteria	<table border="1" data-bbox="448 1048 1485 1160"> <thead> <tr> <th data-bbox="448 1048 794 1081">Subject passing criteria</th> <th data-bbox="794 1048 1141 1081">Passing threshold</th> <th data-bbox="1141 1048 1485 1081">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 1081 794 1115">Exam</td> <td data-bbox="794 1081 1141 1115">50.0%</td> <td data-bbox="1141 1081 1485 1115">50.0%</td> </tr> <tr> <td data-bbox="448 1115 794 1160">Colloquium</td> <td data-bbox="794 1115 1141 1160">50.0%</td> <td data-bbox="1141 1115 1485 1160">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Exam	50.0%	50.0%	Colloquium	50.0%	50.0%

Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Find the domain and the set of values of the function . Determine the inverse function of f. 2. Find the derivative of the function 3. Find local extremes and intervals of monotonicity of the following function 4. Determine indefinite integrals of the following functions 5. Give three applications of the definite integral with appropriate rules. 6. Find the volume of a solid obtained by rotating around the axis OX the graph of the function 7. Solve the logarithmic equation (exponential) 8. Find the area between the two curves
