

Subject card

Subject name and code	Power Electronics Systems, PG_00048263						
Field of study	Electrical Engineering						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Power Electronics and Electrical Machines -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Ryszard Strzelecki				
	Teachers		prof. dr hab. inż. Ryszard Strzelecki				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		10.0	75
Subject objectives	Objectives of this course is a introduce to advanced power electronic systems, design principles and methods of their control in different application areas.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K7_U07	The competence to modelling and simulation of complex power electronics systems using standard simulation packages as well as analysis and evaluation of results	[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU5] Assessment of ability to present the results of task
	K7_K03	Ability to cooperate and organize group activities in the realization of problematic tasks	[SK2] Assessment of progress of work [SK1] Assessment of group work skills [SK4] Assessment of communication skills, including language correctness [SK3] Assessment of ability to organize work [SK5] Assessment of ability to solve problems that arise in practice
	K7_K02	Ability to evaluate the possibilities and effects of using power electronic devices in environmental and social aspects	[SK5] Assessment of ability to solve problems that arise in practice [SK4] Assessment of communication skills, including language correctness
	K7_U02	Ability to analyze results and to select, evaluate and present the most important results of realized tasks in the area concerning power electronics systems	[SU5] Assessment of ability to present the results of task [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
	K7_W10	Knowledge of the principles of operation, design and control of selected modern power electronic converter topologies. Characterizes the design and operation of converters - distinguishes topological aspects of system and application control methods	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation
	K7_U07	The competence to modelling and simulation of complex power electronics systems using standard simulation packages as well as analysis and evaluation of results	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	K7_U02	Ability to analyze results and to select, evaluate and present the most important results of realized tasks in the area concerning power electronics systems	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU5] Assessment of ability to present the results of task [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
	K7_W04	Knowledge and understanding of capability and characteristics of application of power electronic converters in various electromechanical devices	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation

	Course outcome	Subject outcome	Method of verification
	K7_U06	Ability to comprehensively analyze, model, and simulate electrical systems with power electronic converters, using standard cyber-physical simulation software packages.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	K7_W13	Understanding and qualitative analysis of power electronic converters in the scope of concerning quality of conversion electrical energy, efficiency, compatibility electromagnetic compatibility and reliability.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects
	K7_U06	Ability to comprehensively analyze, model, and simulate electrical systems with power electronic converters, using standard cyber-physical simulation software packages.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment [SU5] Assessment of ability to present the results of task
	K7_W04	Knowledge and understanding of capability and characteristics of application of power electronic converters in various electromechanical devices	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation
	K7_W13	Understanding and qualitative analysis of power electronic converters in the scope of concerning quality of conversion electrical energy, efficiency, compatibility electromagnetic compatibility and reliability.	[SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects
Subject contents	<p>LECTURE: Analytical Basics of Power Electronics Systems: General Direct Converter Model, Coordinate Transformation, Spectral Analysis and Power Theory in Power Electronic Systems. Modern PE semiconductor devices (including SiC and GaN switches). Element Modulation Pulse Techniques: Scalar and vector control, Current regulation methods. Multilevel and other Special Converters: Multilevel Inverter Topologies, Multilevel Inverter Modulation Methods, Rectifiers for Multilevel Inverter, other Special Converters; PE Smart Transformers: DAB Topology, Control, Applications. Power Electronics Arrangements in EE Network: Power Conditioning Problems, Arrangements for Mitigation of Power Disturbances, Active PQ Controllers, Hybrid Arrangement of PQ Controllers. Predictive Control of the PE Systems: Hysteresis Based Predictive Control, Model Based Predictive Control. Power Converters with a Input Impedance Sources: Z-converters, qZ-converters, T-converters, multilevel topology. Soft Switching and Resonant Converter : Principle, Overview</p> <p>LABORATORY: Introduction to Matlab simulation tools: the S-function and Simscape Electrical software which operates in the Simulink environment. Implementation of the control system of PWM rectifier in simulation environment and converter operation analysis. Implementation and commissioning of the PWM rectifier control algorithm in a laboratory workbench consisting of a controller unit with the TMS320F28379D microcontroller and a three-phase voltage inverter based on GaN transistors. Simulation and laboratory tests of the system, comparison of results, final report with conclusions</p>		
Prerequisites and co-requisites	Basic knowledge in the field: Electrical engineering, electronics, circuit theory, automation, power electronics in accordance with the subject programs for the first degree studies. Additionally, it is desirable to complete the course Electrical Circuits conducted on the II degree studies.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory practice	50.0%	40.0%
	Lecture	60.0%	60.0%
