

Subject card

Subject name and code	System Diagnostics, PG_00048463						
Field of study	Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			1.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Decision Systems and Robotics -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Mariusz Domżański					
	Teachers	dr inż. Mariusz Domżański					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	0.0	15.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		2.0		8.0	25
Subject objectives	The aim of the project is to acquaint students with the practical problems and methods of processes and systems diagnostic based on exemplary detailed / practical tasks.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.	Student understands the principles of operation of diagnostic systems.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation
	[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by:n-appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation,n-application of appropriate methods and toolsn	Student uses mathematical knowledge to solve practical problems in the field of diagnostics.	[SU3] Assessment of ability to use knowledge gained from the subject
	[K7_U21] can individually carry out an in-depth analysis of controlling, diagnostics and signal processing problems; and, to an advanced extent, is able to individually design, tune and operate automatic regulation, control and robotics systems; and use computers to control and monitor dynamic systems	Student is able to analyze and design control systems used in monitoring and diagnostics problems.	[SU2] Assessment of ability to analyse information [SU5] Assessment of ability to present the results of task
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student is able to design systems for solving diagnostic problems.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
	[K7_W21] Knows and understands, to an advanced extent, methods and techniques of design and operation of automatic control systems, control and robotics systems, as well as the use of computers in the control and monitoring of dynamic objects	Student knows the principles of design and operation of diagnostic systems.	[SW3] Assessment of knowledge contained in written work and projects
Subject contents	<ol style="list-style-type: none"> 1. Explanation of exemplary diagnostic issues discussed within the scope of the subject. 2. Individual analysis of a given tasks. 3. Development of a proposed solution to a given diagnostic problem, and preparation of a presentation of the obtained results. 		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project completion and acceptance	50.0%	100.0%
Recommended reading	Basic literature	<ul style="list-style-type: none"> • Z. Kowalczyk, <i>System Diagnostics</i> - course notes • Korbicz J., Kościelny J.M., Kowalczyk Z., Cholewa W.
