

Subject card

Subject name and code	Recording Technology II, PG_00048330						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			English		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Multimedia Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Bożena Kostek				
	Teachers		prof. dr hab. inż. Bożena Kostek				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	15.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		6.0		24.0	75
Subject objectives	The aim of the course is to familiarize students with the advanced issues of recording technology, teach them to combine knowledge of high-tech recording equipment with artistic skills at the recording studio (multitrack recording).						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U07] can apply advanced methods of process and function support, specific to the field of study	The student can professionally prepare audio-video production.	[SU2] Assessment of ability to analyse information
	[K7_W05] Knows and understands, to an increased extent, methods of process and function support, specific to the field of study.	Student can use computer-based sound recordings and editing platform (track mixing, digital editing)	[SW1] Assessment of factual knowledge
	[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.	Student is able to prepare mastering of a music file	[SW1] Assessment of factual knowledge
	[K7_U09] can carry out a critical analysis of the functioning of existing technical solutions and assess these solutions, as well as apply experience related to the maintenance of advanced technical systems, devices and facilities typical for the field of studies, gained in the professional engineering environment	Student is able to realize multi-track recordings and recordings in omni-directional systems.	[SU3] Assessment of ability to use knowledge gained from the subject
[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student is able to realize live recordings (student can use microphones and video mixer and setup cameras)	[SU4] Assessment of ability to use methods and tools	
Subject contents	1. Introduction. References. 2. Microphone techniques, surround techniques. 3. Multichannel stereophonic recordings 4. Multichannel stereophonic systems 5. Multitrack recordings (acoustical climate selection, dynamic processing, equalization, delays and reverb setting) 6. Computer technique in a traditional sound recording studio (digital controlling, modern ideas of console automation, computer as a sound processor, overview of the newest solutions in computer multitrack recording and editing systems) 7. Making the surround sound (sound sources setup, using mix-console) 8. Making of the surround sound (using computer equipped with multi-channel audiocard) 9. Computer-based sound recordings (track mixing, digital editing) 10. Music production based on MIDI (hardware and software sequencer, sequences editing and playback) 12. Live coverage (microphones and cameras setup, using video mixer) 13. Postsynchronization 14. Dubbing (equipment, creating principles) 15. Using Internet and ISDN in the recording studio 16. Test, final exam		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	50.0%	50.0%
	Practical exercise	50.0%	50.0%
