

## Subject card

Subject name and code	Information Streams Control, PG_00048356						
Field of study	Electronics and Telecommunications, Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Teleinformation Networks -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Marcin Narloch					
	Teachers	dr inż. Marcin Narloch					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		16.0	50
Subject objectives	Accquiring knowledge of information stream control in telecommunication networks						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U06] can analyse the operation of components, circuits and systems related to the field of study; measure their parameters; examine technical specifications; interpret obtained results and draw conclusions	Student practically configures and evaluate information streams control in different network technologies.	[SU1] Assessment of task fulfilment
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student practically configures and evaluate information streams control in different network technologies.	[SU1] Assessment of task fulfilment
	[K7_W05] Knows and understands, to an increased extent, methods of process and function support, specific to the field of study.	Student describes issues of call, connection, congestion and traffic control in networks. Student identifies problems of static, hierarchic and dynamic routing for STM and routing (including QoS routing) for ATM and IP networks.	[SW1] Assessment of factual knowledge
	[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.	Student describes issues of call, connection, congestion and traffic control in networks. Student identifies problems of static, hierarchic and dynamic routing for STM and routing (including QoS routing) for ATM and IP networks.	[SW1] Assessment of factual knowledge
[K7_W06] Knows and understands, to an increased extent, the basic processes taking place in the life cycle of devices, facilities and technical systems.	Student describes issues of call, connection, congestion and traffic control in networks. Student identifies problems of static, hierarchic and dynamic routing for STM and routing (including QoS routing) for ATM and IP networks.	[SW1] Assessment of factual knowledge	
Subject contents	1. Control of call, connection, congestion and traffic 2. Relation among signalization, routing protocols and algorithms 3. Evolution of path selection methods (routing) algorithms 4. Routing with alternative paths: hierarchical and dynamic routing 5. Path selection methods in dynamic routing 6. Notion of cost in STM network routing 7. Application of Markov decision process in path selection methods 8. Learning automata in routing algorithms 9. Examples of routing algorithms implementation in STM networks 10. Routing in ATM networks and characteristics of PNNI 11. Multilevel hierarchy of PNNI topology 12. Routing metrics and algorithms in traditional IP networks 13. IGP and EGP protocols in IP networks 14. Routing in IP networks regarding quality of service - QoS routing 15. Metrics in IP QoS routing 16. QOSPF protocol 17. Constraint Based Routing as a generalization of QoS routing 18. Control and label distribution protocols in MPLS networks 19. Application of MPLS in network resource management and traffic control 20. Stream control in optical network – GMPLS/ASON 21. Concept of Softswitch as an element of call and connection control in IP QoS network		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Reports from laboratory excercises	50.0%	50.0%
	Midterm colloquium	50.0%	50.0%
Recommended reading	Basic literature	.Material prepared by the lecturer in the form of xeroxcopy. Manual in the form of xeroxcopy.
