

Subject card

Subject name and code	Virtual Reality, PG_00058860						
Field of study	Informatics, Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Intelligent Interactive Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Jacek Lebieź				
	Teachers		dr inż. Jacek Lebieź				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		8.0		47.0	100
Subject objectives	The purpose of education is to acquire the skills to design and implementation of virtual reality systems.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student is able to design and implement software to support a selected virtual reality device (eg VR goggles)			[SU1] Assessment of task fulfilment		
	[K7_U02] can perform tasks related to the field of study as well as formulate and solve problems applying recent knowledge of physics and other areas of science	Student manages multimedia data, selects the model visualized object and image generation method, uses specialized libraries for data processing and visualization			[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
[K7_W06] Knows and understands, to an increased extent, the basic processes taking place in the life cycle of devices, facilities and technical systems.	Student knows and understands the processes associated with the rapid technological changes, where fully functional virtual reality hardware or software no longer meets the current standards of use (so-called moral aging).			[SW1] Assessment of factual knowledge			

Subject contents	<p>1. Rules of credit for a course, bibliography 2. Basic concepts: virtual reality (VR), telepresence, augmented reality 3. Three I's – features of VR: interaction, immersion, imagination 4. History of early VR – devices without interaction: Sensorama, head-mounted television 5. First chronological devices with three I's: HMDs, Virtual cockpit, VIVED, Aspen Movie Map 6. Early gloves and haptic displays 7. Other historical VR devices: Videoplace, LEEP Optical System, BOOM 8. Cave Automatic Virtual Environment (CAVE), PDC Cube 9. State of the art of VR devices, future of VR devices 10. VR system architecture – VR engine and input/output devices 11. Interaction – input devices of VR, tracking of six degrees of freedom (x, y, z, yaw, pitch, and roll), tracking performance parameters 12. Trackers: mechanical, magnetic, ultrasonic 13. Trackers: optical, hybrid inertial 14. Navigation/manipulation interface: tracker based interface, trackballs, 3D probes 15. Gesture interface – sensing gloves, sensor types: electrical, fiber-optic, capacitive, strain gauge 16. Immersion – output devices of VR, human visual system, human auditory system, human haptic system 17. Personal graphics displays: head-mounted displays, face-mounted displays, hand-supported displays, floor-supported displays, desk-supported displays, autostereoscopic monitors, virtual retinal displays 18. Monitor-based large-volume displays, projector-based displays, workbench displays 19. Sound displays, 3D virtual sound, head-related transfer function HRTF 20. Haptic feedback, tactile feedback interfaces: tactile mice, vibrotactile feedback gloves, temperature feedback gloves 21. Force feedback interfaces: force feedback joysticks, haptic arms, force feedback gloves 22. Virtual studio – bluescreen (blue box) technique, chroma and distance keying 23. Generating shadows of the virtual objects on the real scene, generating shadows of the real objects on the virtual scene 24. Other special effects used in the film, television, and entertainment industry 25. Physical interactive simulation – simulators of vehicles: flight simulators, marine simulators, train simulators; other simulators 26. History of simulation 27. Modeling for simulation: physical, mathematical, and numerical model; collision detection, interaction with other objects 28. Physical model for simple example – simplified equations of ship motion 29. Analytical solution of simplified equations of ship motion – conclusions 30. Real physical model for ship motion – equations of motion: force of gravity, buoyancy force, driving force, drag forces 31. Real physical model for ship motion – virtual mass, sea surface waves, power transmission system model, control system model 32. Real physical model for airplane flight – equations of motion: force of gravity, aerodynamic lift, driving force, drag forces 33. Real physical model for airplane flight – power transmission system model, control system model 34. Modeling of natural phenomena: fire, smoke, water, rain, fog 35. Modeling of living organisms: plants, animals, people 36. Behavior modeling, artificial life 37. VR in arts, artistic installation using virtual reality and augmented reality, virtual galleries 38. Reconstruction of historical objects or events with using of augmented reality (AR) 39. Other examples of AR applications 40. Medical applications of VR and AR – examples 41. VR and AR in education, arts, and entertainment – examples 42. Military VR and AR applications – examples, wearable computer systems 43. Social impact of VR, influence of VR on human behavior, interpersonal communication, and cognition (virtual genetics) 44. User's performance during VR simulations – influence of interaction techniques, system characteristics and responsiveness, multimodality 45. Health – direct effects of VR simulations on users, cybersickness, adaptation and aftereffects</p>														
Prerequisites and co-requisites	No requirements
