

Subject card

Subject name and code	Robotics in space exploration, PG_00050053						
Field of study	Space and Satellite Technologies						
Date of commencement of studies	February 2024		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Mechanics and Mechatronics -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Wiktor Sieklicki				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		10.0	75
Subject objectives	The aim of this course is to provide students with a knowledge about robotics, automatics, system control, manipulators kinematics, sensors and actuators as well as to show how to design robotic devices for use in space.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_W06	Student can identify and understands working principles and design basics of robotic systems in space industry			[SW1] Assessment of factual knowledge		
	K7_U08	Student can analyze tasks of mechanics and electronics that robots in space require.			[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
	K7_W03	Student can analyse and design stationary mechatronic systems			[SW3] Assessment of knowledge contained in written work and projects		
	K7_U09	Student is able to design original devices and analyze processes occurring in space robotics			[SU4] Assessment of ability to use methods and tools		
	[K7_K03] Can analyse and implement assigned tasks while maintaining high technical standards. Is able to work and interact in a group, taking on different roles. Adheres to the principles of professional ethics and respects the diversity of views and cultures.	Student recognizes methods for designing robotic devices and signal analysis. Student can define group tasks and is able to manage designing robotic systems in group			[SK3] Assessment of ability to organize work [SK1] Assessment of group work skills [SK2] Assessment of progress of work		
Subject contents	kinematics - joints, degrees of freedom, matrices, coordinate systems definition and transformation, D-H transformation, introduction to space robotics, identification of space environment, challenges in designing for space industry, space vehicles types and measures of displacement, sensors and actuators in robotics, unmanned space crafts						
Prerequisites and co-requisites	Mechanics and Strength of the Materials, Automatics and Control, Informatics, Mechatronics						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
		50.0%	50.0%
		50.0%	50.0%
Recommended reading	Basic literature	Craig J., Wprowadzenie do robotyki. Mechanika i sterowanie, WNT, Warszawa 1993 Genta G., Introduction to the Mechanics of Space Robots, Springer Press, 2012 Morecki A., Knapczyk J., Podstawy robotyki. Teoria i elementy manipulatorów i robotów, WNT, Warszawa 1993 Giralt G., Hirzinger G., Robotic Research, Springer Press, 1996 Jazar Reza, Theory of Applied Robotics, Kinematics, Dynamics and Control, Springer Press, 2010 Jarzębowska E., Podstawy dynamiki mechanizmów i manipulatorów. Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa 1998

Berlin, Springer 2008 Morecki A., Knapczyk J., Kędzior K., Teoria mechanizmów i manipulatorów, WNT, Warszawa 2002 Jarzębowska E., Mechanika analityczna. Warszawa, Oficyna Wydawnicza Politechniki Warszawskiej 2003 Arkin R., Behavior-Based Robotics, MIT Press, 1998 Kozłowski, P., Dutkiewicz, W., Wróblewski, Modelowanie i sterowanie robotów, PWN Warszawa, 2003 Bishop R., The Mechatronics Handbook. CRC Press 2002 Schmidt D., Mechatronika. REA, Warszawa 2011	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	<p>Define kinematics of SCARA manipulator, its working envelope, joints, degrees of freedom type and number, redundancy, singularities, create D-H matrix</p> <p>Define differences between analog and digital signal</p> <p>What are accelerometers - their design, working principle. Describe a system for measuring a reaction force between pilot and joystick he is handling while piloting an aircraft - use an accelerometer.</p> <p>What are the features of robots that allow them to be used in space.</p>		
Work placement	Not applicable
